Electricity Account Tax Invoice

Need help with your bill? Visit synergy.net.au/help

Your account details

Account number	123 318 800
Invoice number	2029480338
Date of issue	15 Mar 2022
Account period	12 Jan 2022 - 15 Mar 2022 (63 days)

Your account summary

Opening balance	\$0.00
+	
This bill	
Direct Debit 04 Apr 2022	\$1,025.50
=	
Total	\$1,025.50

If you have trouble meeting this payment, please contact Synergy at least 5 business days prior to the due date.

**You can access
My Account
anywhere.**

(But there are some places you probably shouldn't). With new features added to Synergy's My Account, you'll want to check your electricity account almost everywhere.

Register for My Account at synergy.net.au/surf

From 1 March 2022, the Merchant Service Fees charged for all card payments will change to reflect the costs incurred by Synergy for accepting these forms of payment. You can avoid Merchant Service Fees by setting up a Direct Debit* from your bank account or by using BPAY. Visit synergy.net.au/feesandpayments for information on card payment, Merchant Service Fees and available payment options. *Direct Debit Service Agreement terms and conditions apply.

How much energy have you used?

Your average daily usage **52.8141 units**
Your average daily cost **\$16.54 per day**

Dear Homeowner/occupier

Important safety message from the electrical safety regulator

Switch off the power before entering the roof space

There are serious electrical hazards in roof spaces and the potential for electric shocks is high. Hazards can include deteriorated electrical cables or joints.

For your safety and the safety of your family, please follow these steps, before entering the roof space:

- **Switch off the power at the main switchboard/meter box by turning the main switch to the 'OFF' position.**
- Tape the switch and/or label it so someone else does not turn it back on while you are working up there.
- Let someone know where you are.
- Use a torch and cordless power tools.
- Do not disturb or alter any electrical wiring or junction boxes.
- Keep thermal insulation away from light fittings.
- If you see any damaged or bare wires, call a licensed Electrical Contractor immediately. Do not DIY electrical work.

By law, all tradespersons who need to enter the roof space at your property, must turn off the power at the main switchboard/meter box prior to doing so. Check with them to make sure they have done this before allowing them into your roof space.

Note: This applies to most work (not just electrical work) carried out within the roof space of residential and commercial premises. This may include air-conditioning installers, gas fitters, plumbers, insulators, solar installers, roof carpenters, and pest controllers. There are limited occasions where a tradesperson can work in the roof space with the power on.

Building and Energy has developed stickers to be affixed to the roof space manhole and at the main switchboard/meter box respectively. They should serve as a reminder to turn off the power before anyone enters the roof space.

Sticker for roof space manhole

Sticker for main switchboard/meter box

To order stickers for your home, please email EGPGeneralAdmin@dmirs.wa.gov.au

Yours sincerely

Saj Abdoolakhan
Director of Energy Safety

Service Standard Payments

Did you know that if Synergy or Western Power does not meet certain service standards, you might be eligible for a Service Standard Payment?

Synergy and Western Power have a range of Service Standard Payments applicable to eligible customers if our respective service delivery falls short of the performance standards outlined in the Code of Conduct for the Supply of Electricity to Small Use Customers (Code of Conduct) or the Network Quality and Reliability of Supply Code.

Synergy's Service Standard Payments cover the following events:

Reconnections: a customer can claim a payment of \$60 a day from Synergy for each day a reconnection is delayed beyond regulated timeframes, due to Synergy's or Western Power's actions, up to a maximum of \$300.* The claim must be made within three months of the late reconnection.

Wrongful disconnection: in the event that Synergy arranges for a customer's electricity supply to be disconnected other than in accordance with Code of Conduct requirements, Synergy is required to make payment to the customer of \$100 per day for each day the customer remains wrongfully disconnected.*

Customer service: if a customer's written complaint is not acknowledged within 10 business days, or responded to by addressing the matter in the complaint within 20 business days, a customer can claim a \$20 payment from Synergy.* The claim must be made within three months of the late, or lack of, acknowledgment or response.

Western Power's Service Standard Payments cover the following events:

Notification of planned interruption: an eligible customer may claim a \$20 payment when 72 hours notice of a planned power interruption hasn't been given, except in the case of an emergency or if the interruption was requested by either the customer or the retailer.** The claim must be made to Western Power within 60 days of the interruption.

Extended interruptions: an eligible customer may claim an \$80 payment if the electricity supply to the customer's home was interrupted for more than 12 continuous hours, except in the case of an emergency or if the interruption was requested by the customer or by the retailer.** The claim must be made to Western Power within 60 days after the interruption ceases.

Customer service: a customer may claim a \$20 payment if a written complaint is not acknowledged within 10 business days or responded to within 20 business days.* The claim must be made to Western Power within 3 months of the late, or lack of, acknowledgment or response.

Wrongful disconnection: if Western Power disconnects a customer's electricity supply other than as authorised by the Code of Conduct or by Synergy, Western Power is required to pay the customer \$100 per day for each day the customer was wrongfully disconnected, except if the disconnection occurred for reasons outside of Western Power's control.*

For more information about eligibility and how to apply for Western Power's Service Standard Payments, go to westernpower.com.au

To view the Code of Conduct in full, visit synergy.net.au/terms

* A customer is someone consuming up to 160MWh per year.

** An eligible customer is a customer who consumes no more than 50MWh of electricity per year.

Here are some simple tips to help you improve your energy efficiency around the home.

Cooling and heating

- Don't crank the air conditioner. Set it at 24°C in summer and 18°C in winter, and remember to cool or heat your house up slowly.
- Close curtains to keep the heat out in summer, and open them in winter to let the heat in. A door snake can also keep cold or warm air from escaping.
- Keep your air conditioner running smoothly. Clean the filters and don't forget to get it serviced regularly.

Refrigeration

- Keeping your fridge at 3-5°C and freezer at around -18°C can make all the difference, so don't overcool it.
- Keep the cold in. Check and replace the seals on the doors, dust off the condenser coil at the back, and defrost your freezer regularly.
- Don't under or overfill your fridge or freezer. Try to find the balance between sparse and overcrowded shelves.

Audio and home entertainment

- Don't leave the TV on for the sake of it. Once you or the kids lose interest, it's time to switch it off.
- Switch your appliances off at the wall. Leaving appliances on standby mode still uses power, increasing your electricity costs.
- Unplug your charger, many still use power even when they're not charging anything.

Lighting

- Only light the rooms you're using or make it cosier by using a lamp. Remember to flick off any light switches when you leave a room.
- Ditch incandescent lights for good by changing any old bulbs to energy-saving fluorescent or LED lights.
- Use motion sensor and solar lights outside to light your path and guide your way.

Laundry

- Soak up the WA sun and use your clothesline whenever you can. If you must use a dryer, clean out your lint filter regularly.
- Wash your clothes on a cold cycle. It could also help keep your colours bright, too.
- If you're upgrading your machine, check out a front loader as they usually more efficient than top loaders.

Computers and appliances

- Try and choose the highest star energy rating when upgrading your appliances.
- The bigger the screen that you choose, the more power it will use. Set your screen to sleep generally when you're not using it.
- If you are making a cup of tea or coffee, only fill the kettle with the amount of water you need.

Hot water

- Consider lowering the temperature of your hot water system and turn it off all together when you go away.
- Make the sun work for you and go solar. Solar hot water systems uses less power than electric ones.
- Keeping your hot water system fan free of dust and fluff could also help you save on energy use and running costs.

Cooking

- Keep your appliances in top shape. Clean your rangehood or exhaust fan, check your oven seals and use pots and pans with tight fitting lids and flat bases.
- Resist the urge to check on the oven. Opening the door lowers the temperature, and takes more energy to heat it back up.
