Notes for Consult

- Ask if I'm meant to have breaks / time off - might be burn-out but really struggled with uni this last semester.
 - Not sure if the 50mg is feeling as effective as previously
 - **Often forget if I've taken my meds or not in the morning**
 - Have been getting overwhelmed with tasks & projects more often lately

Stimulant Dose Conversion Calculator: Conversion Tool for ADHD Medications

Dex only dosages

"Personally I take 40mg dex per day split up into three doses, 15mg in the morning 15 mg at lunch and then 10mg in the afternoon.

This is the dosing plan that works for me though everyone is different, you can also see a gp to look after your script although not every gp will be keen on the responsibility.

I have found the key to good adhd treatment is good relationships with your psychiatrist gp and therapist.

These three professionals are very important in receiving quality adhd treatment."

Vyvanse to Dex amount : r/ausadhd

Notes from Consult

- Can take Clonidine with Vyvanse / Dex - can help with the effectiveness of the meds
 - Take 1/2 or 1 with Vyvanse / Dex in the morning & again in the arvo possible
- Lowering body PH levels best for
 - Taking / using a Urinal Sachet can help with the effectiveness of the meds
- Try out the 70mg for about a month or so - then come back - consider if Dex only may be a better option
 - Dex only protocol isn't that bad - can just dose 2x times per day
- Try out 3x Dex at once - see how long it lasts & how you feel with it
