

ABLETON LESSONS • README | TASK LIST

README

Feedback is an essential part of any learning process, and as you learn how to use Ableton / Music Production, I'll also be learning how to teach better.

So as I work on building a base work of how I should structure the learning process, I ask that with each new lesson, that you write down some notes on how you felt about it, or anything I could improve on.

We can call this:

"Learning Reflections"

Some pointers for what you could think about when writing ideas for Learning Reflections:

- Was the lesson easy enough to understand?
 - *If not, why not?*
- Did I move through the content at a pace that was too quick / too slow?
 - *In regards to time slots (normally 1 hour /per lesson) - is it too much / not enough info?*

Every now & then, on a specific lesson, I might add specific feedback questions. This'll be to get ideas on certain things from your perspective. This in the end helps me re-fine the process so that I can ensure a good teaching process / experience that ultimately works for everyone / anyone.

By no means is this necessary every week, but it goes a long way in helping me do what I do.

So...

With all that said, I think it only fair to charge a lower-than-market rate, as well as this I won't be strict on lesson times - will be aiming for selected time-slots (usually 1 hour) but if we tick over ~ thats fine.

If there's any questions, ideas or concerns, please feel free to let me know!

[ADD GOOGLE FORM LINK - WITH SERVICE AGREEMENT]

TASK 1 • Make a Playlist of Music

Include the genres / styles of music that you want to produce. Preferably on Spotify but can be elsewhere like YouTube.

Once you've got it going, share the link.

It doesn't have to be fully fleshed out - once it's shared, whatever you add there down the track, I'll be able to check!

TASK 2.1 • Checking your System

I'm going to be testing out the 'free' 😊 software over the weekend. To make sure that it'll definitely work on your system, it's good to know some basic info.

1. Is your system Windows 11 or Windows 10?
2. Unique Hardware Code for Ableton

This isn't completely necessary but can save us a lot of time first session!

Ableton Live & The Unique Hardware Code

Reference Link: [Authorising Live Offline - Ableton.com](#)

When installing Ableton... 'freely' 😊 We use the 'offline authorisation' - with this, I'll be making an authorisation file for you. This'll be unique to each and every computer / system.

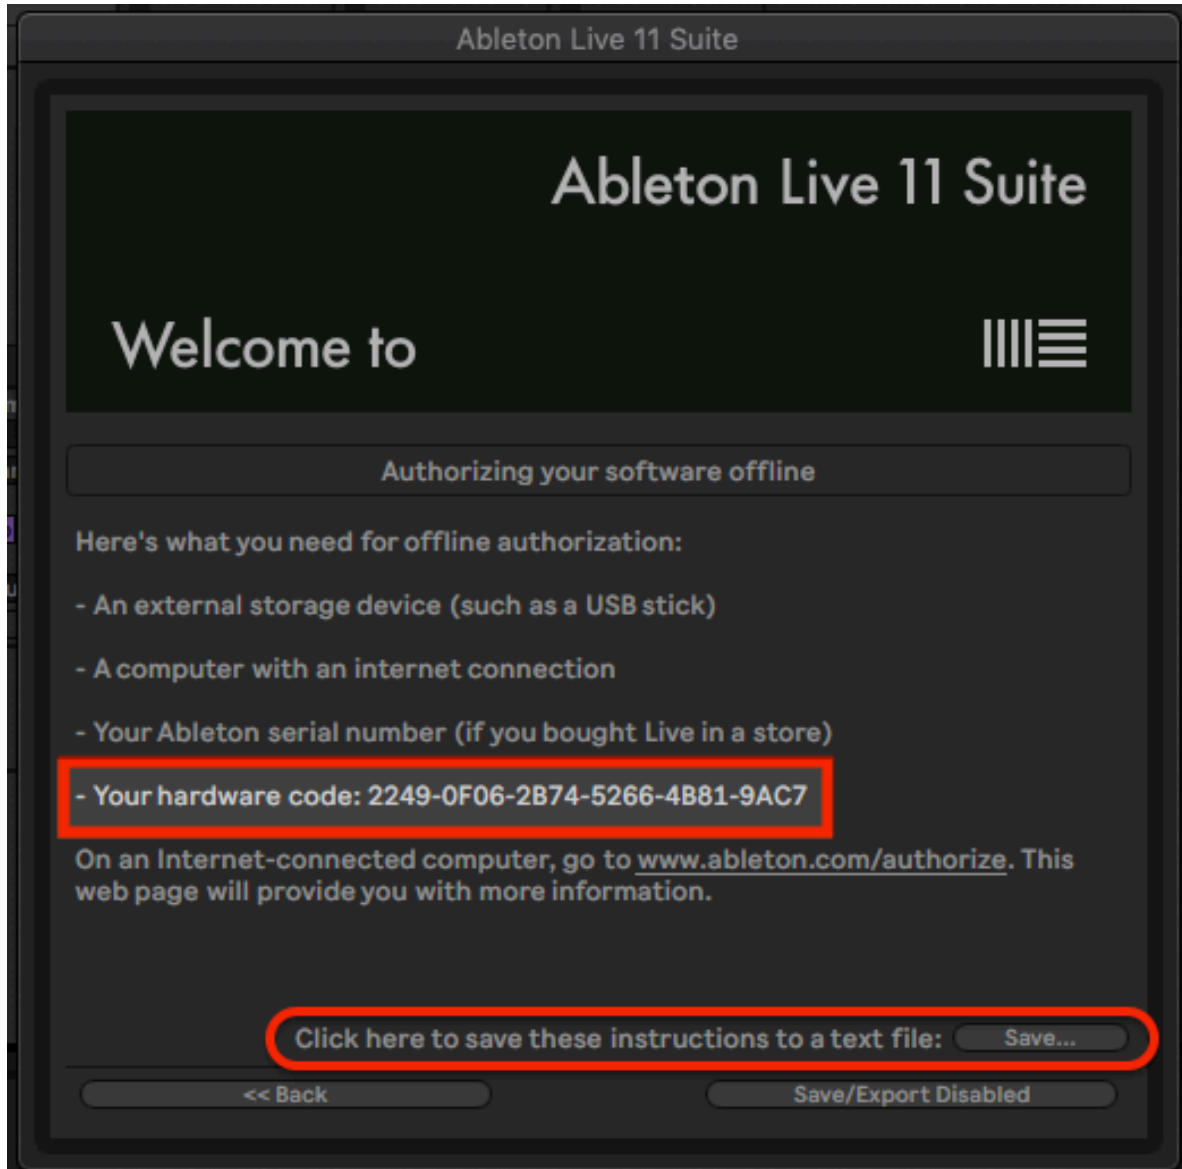

To find your computer's Unique Hardware Code:

- Download the Ableton Live Demo & install
- Run Ableton Live

- On the 'Welcome to' pop-up screen look for: ***"No Internet on this computer"***

- This will take you to another screen where you can find the **Hardware Code**
- Copy it into a note somewhere

From this I'll make the Authorisation file for you - once that's done, you can just drag & drop, then you're all good to go!

If you want me to show you how to make the Auth file for future reference - just let me know!

TASK 2.2 • Sharing Info

I use Google Drive for storage & will upload any documentation, lessons, as well as any assets like sample packs & templates there.

Links will be shared in the coming documentation.

If you already have a Gmail account, make a folder in your Google Drive, and share the link / add me to the permissions.

This way you can upload your working projects straight there, giving me easy access to download them & listen through prior to lessons.

If you don't have Gmail, or use a different cloud storage service, just let me know & we'll figure out the best way to share projects.
