Audi-OH! MM I 2025/09/16

Meeting records [Transcript](#)

Summary

Erin Colgrave and Cody Cork discussed their class schedule, project access, and plans for an immersive audio-visual project, including integrating spatial audio and AI, and collecting feedback through surveys and focus groups. They also detailed their audiobook production workflow, emphasizing consistent levels and exploring collaboration on sound design, while setting up a regular meeting schedule and maintaining a professional practice journal. Erin Colgrave plans to send Cody Cork the ACX audio submission requirements to guide the final mixdown.

Details

- **Meeting Schedule and Project Access** Erin Colgrave and Cody Cork discussed confusion regarding the class schedule, noting that the timetable showed weekly classes while a post indicated fortnightly sessions ([00:13:01](#)). They also expressed frustration over the delay in accessing project work, as it was only made available the day before their discussion. Cody Cork shared a message from Matt confirming that formal classes would only be held on campus in weeks 1, 5, 8, and 11 ([00:14:06](#)).
- **Immersive Audio-Visual Project** Erin Colgrave described an immersive audio-visual experiences project, which is a group project involving planning and execution. The project requires researching, conceptualizing, and producing a small-scale immersive experience incorporating audio and visual elements within a physical space, similar to building projection mapping seen in Europe ([00:15:19](#)). Cody Cork suggested involving film students for projection mapping, which Erin Colgrave thought would be beneficial ([00:16:21](#)).
- **Project Timeline and Format** Erin Colgrave outlined the course's fluctuating schedule, with online sessions for the first six weeks and in-class sessions by week eight ([00:17:26](#)). She noted the first project is due in week seven, which

impacts her original plan for audio testing. The project requires designing a process for analyzing data and conducting audience testing ([00:21:07](#)).

- **Dialogue Recording and Production Plan** Erin Colgrave completed the script adaptation for the first book and plans to record dialogue using a Soundcraft Signature 12 mixer with multiple microphones to capture dialogue simultaneously ([00:18:49](#)). She intends to complete Foley design and sound design for all three books between weeks three and eight, starting with one book in week three to hand off to the group ([00:19:53](#)). Erin Colgrave also highlighted the need for musical elements to build tension and ambiance in scenes with minimal Foley ([00:21:07](#)).
- **AB Testing Strategy** Erin Colgrave proposed AB testing for the project, comparing an unabridged audiobook narration with an abridged immersive audiobook prototype ([00:22:09](#)). She plans to ask Tim if the existing prototype can be used for the second scene, which Cody Cork can then master for beta testing ([00:23:09](#)). This approach will allow testing of various elements, including sound editing, music, narration clarity, and script adaptation, by collecting data from different audience groups ([00:24:25](#)).
- **Feedback Collection Methods** Erin Colgrave detailed several methods for collecting feedback, including surveys for overall satisfaction and specific audio design aspects. She also suggested using focus groups from audiobook listener communities on platforms like Facebook ([00:27:59](#)). Cody Cork recommended using Sampley, an audio version of frame.io, which allows users to comment on specific points in the audio timeline and provides analytics ([00:30:28](#)). Erin Colgrave considered using SoundCloud for similar purposes but will explore Sampley ([00:31:42](#)).
- **Spatial Audio and AI Integration** Cody Cork suggested incorporating 3D or spatial audio plugins for the project, which Erin Colgrave found appealing. They discussed the compatibility of spatial audio with stereo headphones and potentially including questions about headphone usage in the survey ([00:32:56](#)). Erin Colgrave also proposed testing an AI-generated voice in the beta test to gauge audience perception and the realism of their audio production skills ([00:34:06](#)). She also considered using AI for cover art and seeking graphic designers through student job boards ([00:35:23](#)).
- **Audio Standards and Release** Erin Colgrave discussed the importance of adhering to audio standards for release, particularly ACX (Audible's guidelines), noting the challenges Australian users face in accessing ACX membership and free tools ([00:37:49](#)). She plans to export the audio in chapters to maintain

consistency and cohesiveness in volume. Cody Cork suggested including spatial audio downmix versus stereo mix comparisons in beta testing to assess potential information loss ([00:38:59](#)).

- **Mixing and Mastering Workflow** Erin Colgrave indicated that mixing and mastering would occur between weeks nine and eleven, with plans to provide Cody Cork with new sections of the book every two weeks for their work ([00:55:10](#)). She emphasized that the group is primarily a support team for mastering, as her degree covers less of it, but they are open to assistance with sound design if needed ([00:56:32](#)). Erin Colgrave also plans to send Cody Cork the ACX audio submission requirements to guide the final mixdown, treating it as a client-driven project ([00:57:29](#)) ([01:00:44](#)).
- **Audiobook Production Workflow** Erin Colgrave and Cody Cork discussed the workflow for producing audiobooks. Erin Colgrave explained that the entire book should be mixed as one cohesive unit to ensure consistent levels across all files, rather than mixing per chapter. They suggested cutting the audio into chapter-specific files during export, with the narrator announcing each chapter and using scene locators for easy visual navigation ([01:02:12](#)).
- **Sound Design and Collaboration** Erin Colgrave expressed openness to Cody Cork and their team being involved in sound design, including pitching ideas and contributing samples ([01:05:42](#)). Cody Cork acknowledged that their team had previously assumed greater involvement in sound design and Foley recording, but found the current streamlined approach to be more directional ([01:04:28](#)) ([01:06:27](#)).
- **Meeting Schedule and Communication Log** Cody Cork inquired about establishing a regular meeting schedule for check-ins on project progress ([01:07:37](#)). Erin Colgrave indicated their availability on Monday, Tuesday, and Friday between 10 AM and 2 PM, mentioning that Saturdays are typically reserved for recording ([01:08:47](#)). Erin Colgrave also emphasized the importance of maintaining a "professional practice journal" to log technical and creative contributions, production decisions, and collaborations, as required for the project ([01:09:40](#)).
- **Utilizing Meeting Transcription Tools** Cody Cork informed Erin Colgrave that the meeting had been summarized and transcribed automatically, and they would send a link to the document, which could be used as part of Erin Colgrave's required log ([01:11:02](#)).
- **Collaboration with Ben and Analog Recording Techniques** Erin Colgrave mentioned collaborating with Ben, an audio expert and musician, for future

projects and recording sessions ([01:11:02](#)). Erin Colgrave discussed plans to incorporate analog recording techniques, such as using a 1970s National Panasonic tape recorder for tape saturation effects and experimenting with unconventional methods like speaking through a paper towel roll to achieve a distorted radio sound ([01:18:20](#)).

- Ableton Project and Plugin Compatibility Cody Cork encountered an issue with opening Erin Colgrave's Ableton project, specifically with the U Xbox plugin not being found, and mentioned needing to download Ozone 11 again. Erin Colgrave explained that the freeze function in Ableton does not freeze plugins, and encouraged Cody Cork to experiment with the mix, particularly with vocals, as Erin Colgrave was still learning in that area ([01:22:34](#)).

Suggested next steps

Erin Colgrave will include questions in the beta testing survey about the type of headphones used, their impact on spatial audio, and whether voices are real or AI-generated to test audio production skills.

Erin Colgrave will try to find a graphic designer to produce a generative AI cover art novel and ask Tim about the Slack channel for finding project collaborators.

Cody Cork will try to find a free version of Xox Pro.

Erin Colgrave will design, record, and do small mixing and mastering every couple of weeks, then send the progress to the group while she works on the next part.

Erin Colgrave will send the ACX information for cutting and mastering to Cody Cork.

Cody Cork will look at the Ableton project that Erin Colgrave sent through and then see how to distribute the mix and master across the group.

Erin Colgrave will send Cody Cork the scripts and set up a weekly or fortnightly meeting to check on progress.

Cody Cork will create a professional practice journal to log technical and creative contributions and send the meeting notes to Erin Colgrave.

Erin Colgrave will get Ben to jump in on a couple of meetings.

Erin Colgrave will bring her laptop tomorrow in case Cody Cork has more questions.

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

Meeting Sep 16, 2025 at 12:38

AWST - Transcript

00:00:00

Cody Cork: Hello. Hello. Hello.

Erin Colgrave: So sorry.

Cody Cork: Are you all right? All good. All good. How you doing?

Erin Colgrave: Good. I'm just trying to sort my life out.

Cody Cork: I feel that. I feel that.

Erin Colgrave: Yeah. I was looking through like this s*** and it's all about like testing and stuff like that. I'm like, f***, I've got to create it first.

Cody Cork: Testing. What? What's up?

Erin Colgrave: The um I'll pull you over onto this screen so I can get my other s*** together. Um, no, that's the other one. Project one. Uh, design and conduct testing. Uh, audience testing.

Cody Cork: Oh, yeah. Um, well that's apparently tomorrow. Like it has on on the agenda like week one audience testing or something or maybe they're going over it, but I remember seeing on like the schedule or some s***.

Erin Colgrave: Oh yeah, on um f***, I've got so many tabs open. Um f*** it.

00:12:06

Erin Colgrave: I'm just opening a new one. Got so much s*** open. Like just different stuff that I've been looking at. Uh Cam's online. Here we go. I love this little function on my keyboard that allows me to put my fingerprint on and it just puts my password in. So good.

Cody Cork: Oh, dude. How good is it? Yeah, I just bought a a new MacBook and the fingerprint thing is so much better than my old one. It's just like straight straight away.

Erin Colgrave: Well, I've bought a Bluetooth keyboard that has it in it as well.

Cody Cork: Oh, what? That's sick.

Erin Colgrave: Yeah.

Cody Cork: That's dope.

Erin Colgrave: Yeah.

Cody Cork: f*** yeah.

Erin Colgrave: Um because I run another screen as well. I have my laptop up on a stand and then I have all my other s*** in front of me with my mixer in front of me and the monitors and so like it's all and then I can just

Cody Cork: Yeah, it's easy just to bang on your keyboard.

00:13:01

Erin Colgrave: Yeah.

Cody Cork: f*** yeah.

Erin Colgrave: Um yeah, the project chest checklist end of week one is define your individual roles. I don't know what the all-in session is. Is that like the actual class session?

Cody Cork: I don't know cuz um I checked uh the timet and it says that we have a class every Wednesday but I seen that post it's that we only have a class like once every Fortnite or some s***.

Erin Colgrave: Yeah.

Cody Cork: I was like, I don't know if I got confused or some s***, but yeah.

Erin Colgrave: What? When did I've been waiting for three weeks to f***** sort this s*** out and now they like finally put s*** out and like it's all rushed

Cody Cork: Yeah. Cuz um Matt sent me a message or sent us a message um for our group being like, "Hey, can you check the unit page and send a screenshot?" And I'm like, "Yeah, it says that um we don't have access." He's like, "Yeah, yeah, that's right. That's right." This was yesterday, like two days before.

00:14:06

Cody Cork: Like, surely?

Erin Colgrave: Yeah, there was no project because I was trying to have a look at all the project work and stuff and f***** there was nothing there until yesterday. Um, yeah, the Sim 330 Perth has nothing on it. Then there's a Brisbane Perth which has nothing on it.

Cody Cork: Yeah. It's like Perth and Brisbane only apparently.

Erin Colgrave: Then a sim 330 ath.

Cody Cork: What are you looking at? Uh the um campus online.

Erin Colgrave: No slack.

Cody Cork: All the slack. Right. Right. Right.

Erin Colgrave: Yeah. Hey team, welcome to the big one. Who's pumped? Is this what you were reading?

Cody Cork: Um uh yeah, yeah.

Erin Colgrave: 158 and 11. This is the third time I've changed my f***** calendar.

Cody Cork: from Nick.

Erin Colgrave: So, one that frees me up excessively.

Cody Cork: He said, "Yeah, so the only formal classes, this is Matt. Um, yesterday or today? No, yesterday. The only formal classes you will have will be on campus lecture theater in weeks 1, 5, 8, and 11. Yeah.

00:15:19

Erin Colgrave: That means I only have to go into uni four times this Roma. So, I am.

Cody Cork: cuz are you doing another class? Okay, cool. That's kind of I mean that that's perfect for what you're doing.

Erin Colgrave: No, it's just that and the other one. The other one's online. It is I actually think it's kind of cool. It is immersive audio visual experiences.

Cody Cork: Hey BR.

Erin Colgrave: Yeah. And the like the projects here, they're group projects and one of them's planning, the other one's doing. Right.

Cody Cork: BR.

Erin Colgrave: So we are to plan like we have to research and content a plan for a um and produce a concept to assist in a small scale immersive experience that incorporates audio and visual elements within a physical space.

Cody Cork: Oh, the physical space.

Erin Colgrave: Yeah. So you know like in Europe it's a big thing those um building scapes how they have all the imagery and everything that goes all over the building.

Cody Cork: That's interesting. Yeah.

00:16:21

Cody Cork: Yeah. Like a big projection on like a on a building or something.

Erin Colgrave: Yeah. Yeah. But they do it in like um so much s*** open.

Cody Cork: Yeah. I remember seeing it in Spain when I was there like Barcelona and

stuff.

Erin Colgrave: There was one that was really cool. I actually actually I can find it for you. Uh it was trust 7 immersive audio. projection mapping. That's what it's called.

Cody Cork: projection. Yeah. Yeah. Yeah.

Erin Colgrave: Yeah.

Cody Cork: That's cool.

Erin Colgrave: But that's one of like I don't know.

Cody Cork: Like are you with um is it just audio shoot? Is it everyone?

Erin Colgrave: I think it was a an elective.

Cody Cork: Oh, okay. Cool. Cuz it'd be cool if you had like some film kids or some s*** to do um projection mapping stuff.

Erin Colgrave: So I don't Yeah.

Cody Cork: You can do like a cool audio experience with it.

Erin Colgrave: And that's all it is.

00:17:26

Erin Colgrave: So you just like you have engage you can take any from you choose but should engage visuals engage audio and be designed for a specific target audience. So like AR animation live action which is like musicians and actors film elements like touch or proximity sensors in the tactical immersion and action.

Cody Cork: That sounds good.

Erin Colgrave: Yeah. So, but that this f***** course itself for the first three weeks it is on a um Wednesday at 1:00 p.m. online. Then from week 3 to 6 it's on at 12 till 2 on Wednesday online. And then by week eight it's in class on campus.

Cody Cork: What?

Erin Colgrave: Yeah. Yeah. Trust me.

Cody Cork: That's kind of cooked.

Erin Colgrave: sort of like I thought my life out because it's just Yeah.

Cody Cork: Yeah. Yeah, that's fair enough.

Erin Colgrave: Um Yeah.

Cody Cork: Yeah. Um, so with your project, um, so I've written down like a bit of a meeting agenda that I wanted to go through. So I was supposed to meet up with the rest of the group beforehand, but um, last minute I think some bigs popped up and Ry uh, Ryan f***** Riley has a class I think.

00:18:49

Cody Cork: Um, but from memory, I'm pretty sure they're all both are all in to do whatever you need. Um, I think that's last we spoke.

Erin Colgrave: Yeah.

Cody Cork: It was just waiting on confirmation from those guys.

Erin Colgrave: Yeah.

Cody Cork: Um, yeah. Just wanted to check where you were at because you were doing a bunch of the dialogue recording over the break.

Erin Colgrave: Yes. What I've done is I've done the script adaptation for the first one, right? And I was hoping I'm still waiting to hear back from them. Um, but I've got I don't think it'll be this week. I think it'll be next weekend.

Cody Cork: Yeah.

Erin Colgrave: Um, I'm going to get him over here and I'm going to get um Ben over here as well so he can show me how to use this signature 12 thing that I bought off him.

Cody Cork: What's that? The the mixer.

Erin Colgrave: It's a 12 Soundcraft signature 12. So, it's a 12 channel mixer just a and I just want to throw like four or five microphones in there and then just do it all at the same time in the one

00:19:53

Cody Cork: Yeah. Yeah. Yeah.

Erin Colgrave: recording space. Um, and then I wanted like because I plan production plan I've actually put it on my actual screen. So the Foley design and sound design I put between week three and five.

Cody Cork: Wait 25. Yeah.

Erin Colgrave: Yeah. Um Oh, that Yeah, that's the Foley design. won't that's for all three books though and then the sound design for all three books between six and eight but what I can do is I can do one book in week three and then hand it on to

Cody Cork: Yeah.

Erin Colgrave: you guys I want to record the dialogue next weekend so not this one next weekend um and and throw some sound design on that.

Cody Cork: Okay. So, but when you say do one book, do you mean um like record the foy the dialogue? What what do you mean by that? Yes.

Erin Colgrave: Ben's come up with a couple of tracks already. Like it's real ambient guitar. Like it's actually pretty cool.

00:21:07

Cody Cork: Yes.

Erin Colgrave: Um, but I was, like I said, I was going through the I've just finished the script adaption for the first one yesterday. It was a bit more than what I expected.

Cody Cork: Yeah.

Erin Colgrave: Um, but there's got to be like a shitload of stuff like scene.

Cody Cork: M. Yeah.

Erin Colgrave: Like it's not a lot of Foley so much, but it's got to build tension and ambience. Like they're in an alley having a knife fight.

Cody Cork: Right. Right.

Erin Colgrave: Yeah. So that's where it's got to come more into like the musical side and stuff like that.

Cody Cork: Okay.

Erin Colgrave: I was reading this first project, right? And I don't know how it's going to work for you guys. Um it's due in week seven, right?

Cody Cork: Yeah.

Erin Colgrave: So you basically got to design a process of um analyzing your data, right? Doing testing like audience testing.

Cody Cork: Yeah.

Erin Colgrave: Um but f***** I won't get a book done and ready for audio testing in seven weeks.

00:22:09

Erin Colgrave: Like that just completely f***** up my entire plan. So like that's why I was trying to get this earlier, but it didn't release till yesterday. So, what I asking Tim tomorrow because Tim's in charge of mine um if I get the prototype.

Cody Cork: Yeah.

Erin Colgrave: So, what I want to do I think what I'm like for this part of the project is AB testing on um Do you know what AB testing is?

Cody Cork: Yeah. Yeah. Yeah. Yeah. Like comparing two two different ideas or something.

Erin Colgrave: Yeah. So, what I'm going to do is I'm basically going to get a recorded narration of one scene and just as is written off a piece of paper and then I'm trying to

find the word for it.

Cody Cork: Yeah.

Erin Colgrave: Um, I have it all written here. I just got to f***** find where I wrote it. Um, unabridged audio book verse a bridged immersive audio book. So the unbridge audio book is just your standard audio book, one narration.

00:23:09

Cody Cork: Okay.

Erin Colgrave: Read that section, right?

Cody Cork: Yeah.

Erin Colgrave: And then I was thinking I'm going to ask Tim if I can do it, if I can just um use the prototype as a second scene and then maybe get you guys because it's not properly mastered.

Cody Cork: Okay. Yeah.

Erin Colgrave: I could just flick that to you and you can master it.

Cody Cork: Yeah. Easy.

Erin Colgrave: Um, and then I can send those two out as the beta testing.

Cody Cork: Okay. Yeah. Yeah.

Erin Colgrave: And it it asks you in this uh flicking through pages.

Cody Cork: Yeah.

Erin Colgrave: All right. So, you've got to you got to collect data for it basically.

Cody Cork: Okay.

Erin Colgrave: Um so using the research as a mean which I've done most of the research now right um so you've got to suggest areas to address in it like um what aspects do you want to test whether it's game

Cody Cork: Yeah.

Erin Colgrave: mechanics sound design aesthetics all that kind of stuff and justify your choice citing the research and then um figure out who the test audience is and how you collect the data but basically you've got to do it in

00:24:25

Cody Cork: Yeah.

Erin Colgrave: a way that um how it's going to test each individual group member, you know what I mean? So, I've kind of come up with a way that you know, so there's could

be some questions of the quality of sound editing and music and that will test me, you and Ben. Um and then we can test on narration, speed, speeds, um clarity and pronunciation which tests the narrations and the voice actors and unabridged to adapt adaption which is the beta test.

Cody Cork: Yeah.

Erin Colgrave: Um so basically what the you know get half the people just listen to the normal audio book and then half to listen to immersion and then see whether like collect the data and see what how the audience engages and interacts with them. And then like the content of stories will test the author. So did they like the story? Was it too much? Was it not enough? Engage with this character again kind of thing.

Cody Cork: Yeah.

Erin Colgrave: Um so that way it's testing all of us like so I'll I'll create all those and collective data and stuff like that.

00:25:47

Cody Cork: Okay. So, yeah.

Erin Colgrave: But I could I'm gonna ask him if I can just use that scene six then that one's already there. I can give it to you guys straight away.

Cody Cork: Yeah. So that at least Yeah, because that would be the quickest way to get like the um what do you call it? The under bridge. The bridge.

Erin Colgrave: The unbrid is the original and then the bridged is the adaption.

Cody Cork: Um yeah.

Erin Colgrave: So immersive.

Cody Cork: Yeah. Yeah. So yeah, that'll be the quickest way to get like the bridged version. Um h I mean you could just use the same dialogue, right?

Erin Colgrave: Yeah, because I could just get him to narrate that particular scene as a side thing next weekend. And uh well, the unabridged is the original story.

Cody Cork: Oh, okay. Right. I get you. I get you.

Erin Colgrave: So that tests the content of the story.

Cody Cork: Right. I get you. Yeah.

00:26:47

Erin Colgrave: Yeah.

Cody Cork: Sorry. I thought you meant like um just like a like a uh traditional audio

book where it's just the narration and then the like immers immersive version.

Erin Colgrave: Yeahation voice actors. So your voice actors that's like basically audio like basically a standard audio book verse an immersive audio book.

Cody Cork: Yeah.

Erin Colgrave: Um but it but by getting it to read from script as an audio book like from the original story and then by doing the immersive one it also tests um Trista on her script adaptation.

Cody Cork: Yeah.

Erin Colgrave: So between the two we can actually test everybody that's involved in this.

Cody Cork: Yeah.

Erin Colgrave: Yeah.

Cody Cork: Yeah. Cuz how are you going to test it though? That's the one thing. Cuz Yeah.

Erin Colgrave: Well, beta testing like um so I can give so the author's family has read all her books, right? But they haven't heard the immersed version, right? Whereas my family's heard the immersed version but not the original. So we can swap that as two networks and we can get data off them and then collect it together.

00:27:59

Cody Cork: Yeah. Yeah.

Erin Colgrave: Um surveys. You can create a survey um on like sites like Yeah.

Cody Cork: Google forms and stuff.

Erin Colgrave: So just how did you like you know um you get like the listener will listen to it and then or listen to a significant portion engage their satisfaction with the narration plot overall enjoyment.

Cody Cork: Yeah.

Erin Colgrave: So you can do that as a survey and and you can put in stuff about the audio, stuff about sound design, like was it too much, was it too little, was it too overpowering, you need to hear it more, you know what I mean? So that will gauge all the things, but then you can have focus groups like um so there's a lot of Facebook pages of audio book listeners like there's even page that's like my favorite character in the D died

Cody Cork: Yeah.

Erin Colgrave: in the listening to so like my you know my immersive boyfriends just died and it's a support group but um you know like that so you can just reach out and go hey doing this uni project I got

00:29:09

Cody Cork: That's funny.

Erin Colgrave: a bit of beta testing if anyone's interested please contact me and you can get people some actual focus groups that listen to and then you can on certain targets um and that will give you your analytics and metrics

Cody Cork: Yeah.

Erin Colgrave: like well the analytics and metrics are really only after a book is released because then you can put the um review at the So you can have like review questions and then social media listening. So you can monitor social media to see how the audible like unsolicited feedback. So like you can then printing options and understand how the audio books being discussed in different forums and stuff like that. But you'd need the whole before that.

Cody Cork: Yeah.

Erin Colgrave: Um, but I think I'm just survey monkey.

Cody Cork: Yeah. Cuz um I was going to say Yeah. I found a um cuz for that other like that extra film project I was doing last try um I had to do like back and forth um feedback for the music on that. So I don't know if it is relevant but there's um have you heard of frame.io is normally for film.

00:30:28

Erin Colgrave: No. What's

Cody Cork: So frame.io is like normally um yeah for film. So um you can upload like um clips, video clips and stuff. They can comment like on the timeline exactly where where things pop up. Um I found like an audio version called Sampley. Um S A M P L Y. Um, and there's a bunch of other like alternatives because I don't know if like um the free one you you can lock downloads or not, but basically you can like upload

Erin Colgrave: Oh,

Cody Cork: your audio um and then share a link for like uh the audio files and then people can like comment on the exact like timeline where things pop up like oh okay um this section the music's maybe a little bit too loud. Um, and you've got it like all written out on the timeline and it's got full analytics of like how many people listened, how long for, blah blah blah blah. Um, so that that might be helpful or relevant um to you.

Erin Colgrave: Yeah. Yeah, that's a good one.

00:31:42

Erin Colgrave: Um I'm just adding it. Yeah, I was going to use um uh Soundcloud for similar purpose.

Cody Cork: H. Yeah.

Erin Colgrave: Um but I might look into that because you can also test it that way as well. Um I just want to confirm with him about this testing thing like this it's due week seven.

Cody Cork: Yeah.

Erin Colgrave: So I just want something I can quickly running. So, one, if I could just use that, then I'll be able to get quickly and then start distributing it. Um, and then work on the other projects and then like give them to you as they progress. Um, but it will give you a good insight as to like if I give you the one like like the prototype, it'll give you a chance to play with it.

Cody Cork: Yeah, cuz um the other thing that I had written down, so over the break I was looking at different um plugins and stuff for like I've been trying to figure out a way to do like 3D audio or like you know like spatial audio.

00:32:56

Erin Colgrave: radio.

Cody Cork: Yeah. Just like with headphones so I don't have to like mix it with surround sound. Um and I found a couple that I haven't tried out yet but um I was going to ask you if that would be something um you'd be interested in for your project.

Erin Colgrave: Yeah, that would be really cool.

Cody Cork: Um, I'll send you a list of what I ended up grabbing. Um, but yeah, it's pretty much just like a few plugins where like like a 3D panner and stuff like that kind of that kind of stuff where it's like instead of just left or right, you've got like a

Erin Colgrave: Yeah.

Cody Cork: full like back and forth like full 3D. Um, so the only thing with that is I got to check whether like how compatible it is with stereo headphones cuz like AirPods and stuff are spatial audio now, but not every headphone has them.

Erin Colgrave: Oh yeah, that's Yeah.

Cody Cork: Um, and maybe that's something to include in your like uh survey or

feedback form or whatever. Like what headphones did you test on?

00:34:06

Erin Colgrave: Yeah.

Cody Cork: Did you have like spatial audio? Did you feel like it had an impact or whatever?

Erin Colgrave: Yeah. Yeah, I was actually also going to do um uh I want to throw like in in the like beta testing, I want to throw an AI voice there somewhere, right?

Cody Cork: Um, okay.

Erin Colgrave: and then put a question in there saying, you know, um do you think that this has uh these are real voices or AI generated? If so, which ones? And then because on uh Survey Monkey, you can do that and then once they've answered the question, you can actually give them a little insight into what it actually was.

Cody Cork: Yeah. Yeah. Like a um Yeah.

Erin Colgrave: Yeah. because that will test our audio production skills and whether like we make it sound really realistic or if we've over comped it or whatever and it sounds AI or what the audience actually thinks a about AI in general. and also um a generative AI cover art like novel and then see if I can find someone that like does graphics to actually produce one for me and like

00:35:23

Cody Cork: M. Yeah.

Erin Colgrave: because you've got to have got to have a cover plus the audio to do it. Yeah. So, like, you know, I could do like um You don't know any graphic designers, do you would want to do it.

Cody Cork: Uh, nah, not off the top of my head. Plus, the only ones that I would maybe know, they'd be like, "No, you pay me sort of s***." And it's like, "Oh, god. Um,

Erin Colgrave: Yeah. What I was trying to figure it out yesterday on Slack um what the channel is for, you know, when people go up and go, "Hey, are you doing this? Is anyone interested in doing this for me?

Cody Cork: I know there's like the cuz I got the that film project from the audio opportunity.

Erin Colgrave: You know, yeah, I'm ask I'm going to ask Tim.

Cody Cork: So, I don't know if there's one for like every discipline. Um, yeah, same.

Erin Colgrave: Um like you know how they have like student lounge but I've got all the music one like music opportunities music room.

00:36:38

Erin Colgrave: So there must be there's got to be because I've seen it come up.

Cody Cork: There's got to be something. Plus, I think you can post in the um the capstone job board as well being like, "Hey, looking for a graphic or design student to help out

Erin Colgrave: Yeah. It was Yeah. Yeah, because that way I can do like you know if I do like the unbridgeid first bridge I can do one as a you know yeah and have that in the beta testing as well.

Cody Cork: AI cover and then another one as like a designed one.

Erin Colgrave: Um cuz there is I I found some scholarly references on um AI verse humanized.

Cody Cork: Yeah.

Erin Colgrave: Um and like there is because it's so new, they're so hard to find something that relates to immersive like there's lots relate to audio books but not immersive audio books. Um and I found some references that they're like, you know, AI is a new thing in audio book blah blah blah. But then you go into like ACX which is Audible which is the main like there's no governance for audio books at the moment but and there's no general standards but ACX kind of covers most of it because most

00:37:49

Cody Cork: Yeah.

Erin Colgrave: people go through Audible. Um and but it's not available in Australia if you're Australian.

Cody Cork: Yeah.

Erin Colgrave: You have to be like from Ireland, the UK or America to actually get a membership for ACX which is really f***** annoying.

Cody Cork: Wait, really?

Erin Colgrave: Yeah. And I was trying to find um like there's these programs that you can run your audio book through and it will tell you how matches standard and ACX have one for free if you're a free member, but I can't f***** log in because I'm not American or from the UK or from Ireland. Um but the other ones I found you have to

pay a subscription. I really don't want to.

Cody Cork: Are you talking about like just like audio standards like loudness standards and stuff or

Erin Colgrave: Well, I've got all the information from ACX. Um, but like so I know how to like I'll send it to you because it's it's kind of what I want to aim to achieve ready for release.

Cody Cork: Yeah. Yeah.

00:38:59

Erin Colgrave: Um, and it's just got bit size and all that kind of stuff and how you got to format. I'm thinking of doing like to keep the cohesiveness and consistency of volume throughout the like because you don't want another chapter to come in and then it just go completely f***** yeah all in the one session and then

Cody Cork: Yeah. Just like a little transition. Yeah. Yeah.

Erin Colgrave: as we export it export it in chapters I think that'll be the best way to do it.

Cody Cork: Yeah. Also, I just um just popped to my head um with the uh spatial 3D audio as well. Um you should maybe if we ended up doing it in time. um you should maybe include it in your beta testing on um how that works when you down mix cuz I know that like there's some apps and plugins where you basically mix it in this 3D audio and then you down mix it to stereo.

Erin Colgrave: Yes.

Cody Cork: Um how that sounds compared to just like a stereo mix if that makes sense.

00:40:14

Erin Colgrave: Yeah. Yeah. It's a special audio vers.

Cody Cork: Yeah. So, like spatial audio down mix versus stereo mix, if that makes sense.

Erin Colgrave: Yeah.

Cody Cork: It's pretty much like like mixing in 5.1 and then you down mix it to stereo compared to just a stereo standard where sometimes um like information gets lost or whatnot.

Erin Colgrave: Yeah.

Cody Cork: Um cuz like I'm cuz I know that like Apple Music and stuff now basically you can't put it on Apple Music unless you have um not spatial audio but like something like that like it hits like a certain

Erin Colgrave: Yeah. I don't know how Oh, your laughage.

Cody Cork: standard. What's that?

Erin Colgrave: Your love meter.

Cody Cork: Yeah. Yeah. Um, so yeah.

Erin Colgrave: Yeah. Yeah. I've got all that information like your um levels on what they want their LS to be and s*** and what's your standard. I know all of that. Um yeah, I'll

Cody Cork: Yeah. Cuz do they have like like like two versions or something where it's like you can listen in just stereo and say surround sound or is it just stereo?

00:41:38

Cody Cork: like the the standard I mean Yeah.

Erin Colgrave: Uh the standards just your overall loudness and and like each so YouTube has a different standard to Spotify which has a different standard to Apple Music.

Cody Cork: Yeah. Okay.

Erin Colgrave: Um, so you down mix per and it's just a loudness me and like it's all right if you go o over or under but that will boost to that ls meter right so so if you cut it it's

Cody Cork: Yeah. Yeah. Yeah. Yeah.

Erin Colgrave: going to clip all your s*** and like make you Yeah.

Cody Cork: Yeah. Yeah.

Erin Colgrave: And if you are too low they turn it up you're going to get unwanted floor noise and s*** like that. So, um, they when when they say you want to release something, they kind of say, you know, try to figure out beforehand where you want to release it and, um, you know, test your love meters to get to the like gain stages to that level.

Cody Cork: Yeah. Yeah. Um, I think I was more thinking of um I think I'm I'm thinking from a point of view of like a film um perspective cuz like you know how like uh DVDs or whatever or even um Netflix and stuff they have multiple audio tracks.

00:42:53

Cody Cork: So say you have a surround sound set up you have to click the surround

sound audio track.

Erin Colgrave: Yeah.

Cody Cork: So then it actually puts out the 5.1 um audio track. So if you try to listen to 5.1 on your TV, you'll get like you'll miss um a whole bunch of the actual audio cuz it doesn't have anywhere to play.

Erin Colgrave: Yeah.

Cody Cork: So I was just wondering whether they had something like that for audio books where it's like multiple audio tracks like one stereo, one surround spatial audio.

Erin Colgrave: see the standard the idea of the audio book and and the reason why audiences or certain owners would like because it's like um it saves you time so you can multitask while doing it um is reasons that they

Cody Cork: Do you know what I mean? Yeah. Yeah. Yeah.

Erin Colgrave: do it. So, the most common listening device is a tablet or a phone um and like headphones through that.

Cody Cork: Yeah.

Erin Colgrave: So, I I'd personally, as much as I love that idea, I don't think they're there yet.

00:44:01

Erin Colgrave: Um and and because it's quiet already, like the LS it's like -23 or something like it's quite low.

Cody Cork: Yeah. Cool. Really?

Erin Colgrave: Yeah.

Cody Cork: s***. Okay.

Erin Colgrave: Yeah. Um, I'll definitely page that I'm going to think, but I think like yeah, because it's quite low, I'd keep it just stereo.

Cody Cork: Yeah. Okay. Yeah.

Erin Colgrave: Um, most yeah, most headphones are just stereo.

Cody Cork: Yeah, that makes it way easier to be honest. Um, yeah.

Erin Colgrave: We're not at that level of technology where everyone has spatial headphones. Like just coming out with it now, but you can also turn that off.

Cody Cork: Yeah.

Erin Colgrave: you know what I mean? Um, but like, you know, I don't think Samsung's quite there yet or the general headphone or the, you know, Beats might.

Cody Cork: Yeah.

Erin Colgrave: We're talking about, you know, the the average homemaker, the average.

Cody Cork: Yeah, that's Yeah. Like you're talking about the the mass market, the

majority.

Erin Colgrave: Yeah.

00:45:04

Cody Cork: Yeah.

Erin Colgrave: And most people that listen to it, they're either on the train or they're in a car or they've got their headphones in. So none of it is really worth the 5.1 or spatial mixing because they're just not using

Cody Cork: Yeah. Yeah. Yeah. Yeah.

Erin Colgrave: it on those kind of devices if you did.

Cody Cork: Yeah. Yeah, I guess it' be something to look into, you know, for the future, but like as of right now, there's no it's not worth the the effort for it.

Erin Colgrave: Yeah. Yeah.

Cody Cork: Yeah.

Erin Colgrave: Yeah.

Cody Cork: Cool.

Erin Colgrave: Yeah. Because the market is growing, more and more people are getting involved in it.

Cody Cork: Sweet.

Erin Colgrave: Um but yeah, it's all on it's mainly um small speaker systems that it's being heard on. So if we try the mixing on small speaker systems.

Cody Cork: Cool. That's That's a good point then. Um cuz yeah that'll be that'll be interesting to test out then for like the master like instead of just listening in the studio like actually try your headphones, try it out in your car.

00:45:50

Erin Colgrave: Yeah. Because you're not listening to Yeah. Like Yeah. That's one thing that Matt did mention on feedback. He's like um like he's really impressed with it, but he also said going forward um try focus on you know main listening devices like and and what it's small and like I said I didn't really mix it properly. I ran out of time like yeah you can do a lot more with it. Um, but I've also put plugins on it that you probably don't have. So, do I turn them off before I send you the tracks or I used I used um Xbox Pro vocals by Neuro Audio.

Cody Cork: Um, what did you mix it in? Pro Tools or Let me look it up. Was it Xbox?

Erin Colgrave: Xox Pro. Yeah.

Cody Cork: Xbox Pro. Uh, who's above?

Erin Colgrave: neuro audio cuz I really don't understand this phrasing thing. Like if I phrase it, does it capture that sound?

Cody Cork: Um, so I heard of Xbox Pro. Let me let me see if I can find like a sneaky free version.

00:47:27

Cody Cork: Um, oh yeah.

Erin Colgrave: It's just because I don't know how to mix vocals properly and that's just got everything in it.

Cody Cork: Yeah, that was cool, actually. Um, so if I can't find a sneaky version, um, I would say basically cuz I don't know how the the the freezing works as well. Like I'm pretty sure that like if you freeze the track, it um like even if I don't have the plugin, it should just um apply the effects.

Erin Colgrave: Yeah.

Cody Cork: Um so to maybe like cover all bases, I would just like duplicate the track, have one frozen with the plugin, and then the second one um flatten it. So freeze and flatten and it'll just um output just the audio like whatever's on your effects chain. Put the track out as audio and just mute the the flattened one. So if the freezing doesn't work at least I'll just have like the whatever you've mixed as um each audio track um getting live.

Erin Colgrave: Yeah. Yeah. Just copy over track and then send you the stems or do you want me do you want me to send you the door session itself?

00:48:47

Cody Cork: Sorry. Yeah. Send me the Ableton. Oh, actually, do you I don't think you've sent the Ableton um project file.

Erin Colgrave: Actually, I think I sent Did I Yep.

Cody Cork: What? Can you actually check what version of um Xbox that you have?

Erin Colgrave: Let me open up Ason. Uh I got it last year. So plugins near audio.

Cody Cork: So, so usually somewhere on the plugin, you can click um maybe where the title is where it says Xbox and it'll come up with like the um version number or like about if it says like about

Erin Colgrave: That's a compressor. Get out. Uh, Xbox Pro. Would I need to look it up? Not in Ableton. Well, hang on.

Cody Cork: uh you can do it like on the plugin. So usually so 1.0 0. Okay, cool.

Erin Colgrave: Um, version 1.0.3.

Cody Cork: Cuz I can get a version that's 1.0.6. Um, so I'll see if I can get find a version for I think it's the only one.

00:50:42

Cody Cork: So, did you buy it?

Erin Colgrave: Yeah, I bought it. Well, my mom bought it for me. It cost like \$800.

Cody Cork: 800. Jesus.

Erin Colgrave: Well, it's it's more than just this in it.

Cody Cork: Um, yeah, it's like a vocal effects chain thing.

Erin Colgrave: It's got compressors. It's got all their tuners. It's It's got f*****

Cody Cork: So, I'll So, I'll be able to open um I should be able to open up your project file with the Xbox anyway. Um, I think if I like I might have to do what we were talking about where like I freeze and flatten if I make changes or anything though cuz um I'll have a version that's like newer than yours unless you want to update it to 1.0.6.

Erin Colgrave: I'll throw it in Slack and send it to you as a zipped file. See if you can open it. If not, I'll just turn all the effects off um to allow you to play with it. Does that make sense?

Cody Cork: Yeah.

00:51:54

Cody Cork: Yeah.

Erin Colgrave: Cuz I know you got 12 like we've cross files before um and yeah on the last project.

Cody Cork: Oh, yeah.

Erin Colgrave: So we were easy to like we're easy enough to jump through the sessions. Um, how this opens up with you. I can't remember if I kept the freezing on them or not. Let's open it up. Yeah, I've got the freeze on them in the one I sent you.

Cody Cork: Yeah. Okay, cool.

Erin Colgrave: Um, yeah. So, see if it opens up and they work cuz I just really liked the um effects that went on it.

Cody Cork: Yeah. Yeah.

Erin Colgrave: Um, but you can also change them and stuff. That was just me trying to make something cool out of nothing. Um, and like try to figure out this new plugin.

Cody Cork: Yeah.

Erin Colgrave: But, um, the whispers group, they're ones that I kind of wanted thrown around.

Cody Cork: Yeah.

Erin Colgrave: I've made them spatial. Um, so they kind of sound cool as that reverb throw you did in that um, losing my mind because it the whispers are in his head.

00:52:55

Cody Cork: Yeah. When you say thrown around, you mean like like around the heads? Yeah. Yeah. Yeah.

Erin Colgrave: So you want to make it sound special. You can tell the difference between outside his head and inside his head because that's a big feature of this book.

Cody Cork: Yeah.

Erin Colgrave: Like because a serial killer has 49 vict like this the serial killer is the woman but the male he has like all 49 or 46 victims of hers in his head. So he's going out to kill her.

Cody Cork: Right.

Erin Colgrave: You don't know you think he's the serial killer the whole time until the alley scene and then you realize it's the girl. Um so he's getting haunted by her victims.

Cody Cork: Right. Yeah. Yeah.

Erin Colgrave: Yeah.

Cody Cork: And you kind of want to get it like Yeah.

Erin Colgrave: So, you really want the distinction between inside his head and outside, which is why I've tried to do the spatial thing.

Cody Cork: Yeah.

Erin Colgrave: Um, but I just think reverb throws would kind of work there.

00:53:55

Cody Cork: Yeah. Cool. Cool. Cool. Do you have um is that part of the um the script where it's got the like sound design or like do you have like a different mix um direction that you want for for it?

Erin Colgrave: Yeah. And it's it's just a loose one. If you have any other ideas that you think might work, I'm happy to hear them. Um, basically just a guide.

Cody Cork: Yeah. Yeah. Um, yeah, some way to like kind of kick it off, um, would be good.

Erin Colgrave: I kind of make it up.

Cody Cork: And then I can kind of work on that, send it through to you, and then you we can kind of bounce back and forth. Um, yeah.

Erin Colgrave: Yeah. Um, but I'm thinking even if we just I'll confirm it with um Tim tomorrow, like see if we can just use that for the beta testing um and do the AB thing and then do um some SE monkey uh survey monkey surveys on um like the bridged versus unbridged um how the voice actors were, how the music design was and all that kind of stuff.

00:55:10

Erin Colgrave: So I can because us in the project to um collect all the feedback and stuff and analyze how as a group like that's the overall um content I think like from what I'm reading a couple of days to

Cody Cork: Yeah. Yeah.

Erin Colgrave: figure out but starross adapted script.

Cody Cork: Cool.

Erin Colgrave: All right. So, close everything.

Cody Cork: Um so like overall um so what's left like broad strokes for the project and then what do you want us to I guess maybe this is a question that might be best answered like after tomorrow you've spoken to Tim to get like clarification and stuff. Um, but as like a project whole. Um, so you've got the sound design, uh, Foley.

Erin Colgrave: Yeah, the mixing mastering I had between week nine and week 11, but you'll probably go all of it then. So what I'm thinking is that like do one then give it to you to work on while we create the other one and then get you to work on that one and then while we work on the third

00:56:32

Cody Cork: Cool.

Erin Colgrave: one. So you've got addition like you probably have a new one every two weeks to work on.

Cody Cork: Yeah. Um, and that's So, did you want us just to focus on the mixing and mastering? Did you need us for like sound design as well? Right.

Erin Colgrave: like you can jump in on sound design if you want, but that's what I said.

Cody Cork: Yeah.

Erin Colgrave: Like I like between uh Ben and I, we can probably handle most of that. Um, and the only reason I ask that is because I know you guys are working with a whole bunch of other people and I don't want to throw too much on you.

Cody Cork: Yeah.

Erin Colgrave: Where I fail in it, well, I don't fail in it, but I don't know enough about it, is the mastering process because we don't learn a lot of it in the music degree.

Cody Cork: Yeah. Yeah. I mean, we didn't even really learn about too much for the audio as well. Was like half a unit, but but yeah.

00:57:29

Cody Cork: Um, cool. All right. Well, I mean, at the end of the day, um, we're basically here as like the support team for whatever you need. So, like, um, say you you're doing the Foley recording and stuff and then you're like, um, s***, I got so much documentation to write up. Can you guys jump in for some sound design? Um, just let us know. Easy peasy. Um, yeah.

Erin Colgrave: Yeah. Well, I'm sending you the adapted script um for you to read. Like the one that I've sent you is the prototype. Well, I've sent you the whole script for the whole book, right? But the door session is the prototype which I want to beta test.

Cody Cork: Yeah.

Erin Colgrave: Um so, if we can get on to that uh quickly, like within the next couple of weeks, so I can I have a chance to get it out there.

Cody Cork: Yeah.

Erin Colgrave: Um, and I'll get the non like the unabridged script when I do the recording next week.

00:58:22

Cody Cork: Yeah.

Erin Colgrave: Um, and then I'll create all the surveys and s*** with Trista and um, and if you have any questions you want on there about the audio that you've that you've done or thought of, you can throw them in. Um, and I I'll cross base with you before I

put it out.

Cody Cork: Yeah. Yeah.

Erin Colgrave: Um, and then what I'll do is I'll try design every couple of weeks. So once I get like we'll design it, record it and design it and do small mixing mastering on it.

And then if I throw that to you guys while we work on the next one, so on and so forth.

Cody Cork: Yeah. So it can Yeah.

Erin Colgrave: So if if there's anything or you think that could um make it more immersive or it's too much um you can be like the the kind of yeah I like it but it would be good if we could

Cody Cork: rotate.

Erin Colgrave: do this or this or this would benefit you know what I mean like yeah and then the final mix and master probably like if you guys have the time to do it Um yeah,

00:59:29

Cody Cork: Yeah. Second pair of ears pretty much. Yeah, I don't think the mix and master will take too long to be honest. Um

Erin Colgrave: like cuz I know that you guys got a shitload on. Um cuz you're taking on a few people. Um but they Yeah, they're like I think the second one's going to be the longest cuz I they're going to be big files. Um because they're So, this one scene that I did, I think there's 12 scenes in this first book or 10 scenes. That one scene was 6 minutes long.

Cody Cork: Yeah.

Erin Colgrave: You know what I mean? So, it probably be like maybe an hour of audio.

Cody Cork: like total like all chapters together.

Erin Colgrave: Yeah. And that's just like the final cutting and stuff.

Cody Cork: Cool.

Erin Colgrave: and uh I'll send you the um ACX information um of to be cut and mastered and you can probably take put that as a focus on um on your side um because it will be like um

01:00:44

Cody Cork: Yeah. Yeah. Yeah.

Erin Colgrave: like a cl a client's a client's hiring you to do the final mixdown of this but they want it in this format.

Cody Cork: Yeah. Yeah.

Erin Colgrave: Does that make sense?

Cody Cork: Yeah. Yeah. So, if you if you got all the info um for the um like audio standards, that would be um perfect. then I know exactly yeah what lots to hit um and uh how you want to export it and stuff.

Erin Colgrave: Yeah. Says a Yeah. So, ACX audio submissions. So, I just found this really f***** interesting here. Uh, have a look into this. I'm sending it to you all in Slack. Um, yeah.

Cody Cork: Yeah, amazing.

Erin Colgrave: So, it says, "What are the content requirements for audio files? What are the requirements for file names? What are the submission requirements for audio quality and what are the submission requirements for bit rate?

Cody Cork: Coca-Cola.

Erin Colgrave: Do I still have you?

Cody Cork: Yeah.

01:02:12

Cody Cork: Yeah. So, just make sure I get brain dumping um ideas.

Erin Colgrave: Yeah.

Cody Cork: So, I'm even thinking um cuz uh from what you're saying basically would be kind of doing it like chapter by chapter and then consolidating into um like the book, right?

Erin Colgrave: Well, whole book and like put in like, you know, scene locators and so then and that way it will all be cohesive like across the whole book and then um once it's all mixed and mastered it will be

Cody Cork: So, one thing Yeah.

Erin Colgrave: the same. like all the love are going to be the same like for every file. So instead of doing it per chapter, do it as one big book, but then when you export it out into um audio files, cut it at the time scenes, like per chapter, I'll have the narrator um say chapter

Cody Cork: Oh, okay. Yeah. Yeah. Yeah. Okay. So that basically Yeah.

Erin Colgrave: one, chapter two, chapter three, and I'll have the um scene stamps in there or the uh what are they called?

01:03:22

Erin Colgrave: the locators, you know, so it will be easy to visually see it. Um, because there'll be a introduction, then the book, and then an outro, and it will say who all the voice actors were in it, who it was written by, like all that kind of stuff. Um, so yeah, we'll have the intro, chapters one, in this case, chapter 1 to 10, and then outro all as like say just do it all the same. coercive like across it's one major mix and then once you're happy with the mix break it into those files as treated on the ACX website.

Cody Cork: Yeah. Cool. Cool. Cool.

Erin Colgrave: Yeah.

Cody Cork: Yeah.

Erin Colgrave: So there at ACX um and then yeah bounce them out like that and um basically like produce the files that that's requesting.

Cody Cork: So that that Yeah.

Erin Colgrave: So, we give you material and the mix down of it and then you guys do the mix to that standard and bounce it back out to us.

Cody Cork: Yeah.

Erin Colgrave: Yeah.

Cody Cork: Easy peasy.

01:04:28

Cody Cork: Yeah. Yeah.

Erin Colgrave: Yeah.

Cody Cork: That's um Sarah.

Erin Colgrave: So, so if I do one book, hand it off to you, and then while you're working on that one, I can work on the second one and then just bounce them to you. Yeah.

Like even if you guys want to do one each or whatever, I don't know how like you said two other people were interested.

Cody Cork: Yeah. So, I mean supposed to clarify today um uh like how we probably going to approach approach things. Um, but yeah, I mean, talking to you now, it kind of makes a lot more sense where um, I think we were assuming we would jumping in on like a lot of the sound design and the maybe not

Erin Colgrave: Yeah.

Cody Cork: the foley recording, but I thought Yeah.

Erin Colgrave: you can do too. That's what I'm saying. But I'm more than happy to um jump in on that as well.

Cody Cork: Yeah.

Erin Colgrave: Um sending you a basic mix down.

Cody Cork: So, but because it's such long format, I think um I'll see how the Ableton project is the one that you sent through and then maybe see how we go about like maybe distributing like the mix and master across that way between us and then yeah.

01:05:42

Erin Colgrave: So if you're listening to it and go, "Hey, this would be really cool if you added this into the sound foley here or I don't really like that bit. This one might be better." Like you're still going to get sound design involvement there.

Cody Cork: Yeah.

Erin Colgrave: You know what I mean?

Cody Cork: Yeah.

Erin Colgrave: Like I'm not opposed to you guys pitching ideas into it.

Cody Cork: Yeah. For sure. Show.

Erin Colgrave: Yeah. or if you like and I'm going to send you the scripts as well so you know what kind of sound design's going to happen into it and if you get it go hey I've got a really good sample

Cody Cork: Um. Yeah.

Erin Colgrave: that will work really well there more than happy to take that sample on you know what I mean so it's it's you guys be involved in sound design I just put too much on yours yeah I was trying

Cody Cork: Cool. Cool. Cool. Yeah. Yeah, of course. Yeah.

01:06:27

Erin Colgrave: to think of you like Hey.

Cody Cork: Yeah, for sure. For sure. I think um I think maybe just even with like the game groups and stuff where um like it's a very different experience where we're kind of like stumbling through it because we don't have um a stronger like direction

Erin Colgrave: Yeah.

Cody Cork: for audio whereas like yeah I think what what's set up here is a a lot more streamlined and directional. So, f*** yeah.

Erin Colgrave: I've been thinking of his the whole time. I'm like, what can I get him to do? What, you know, what can benefit in it? Um, yeah, because the biggest part of this is getting those recordings done because they're going to take a bit.

Cody Cork: Yeah.

Erin Colgrave: So basically like I'm gonna invite them all over next Saturday. I'm more than happy if you can get up to your Rolly Stone next Saturday.

Cody Cork: I I still not allowed to drive. So yeah.

Erin Colgrave: So like but not included. You're more than happy to be included in it.

01:07:37

Erin Colgrave: I'm more than happy for you to be in that process, but I also know that you can't really get around. So up to you.

Cody Cork: Yeah. Easy. Um and one last thing. So, I had um down as like a generalized schedule like moving forward like did you want to do like a weekly fortnightly meeting or some s*** to kind of check in where we're at, where we're going?

Erin Colgrave: Yep.

Cody Cork: Um what what's best for you? Like what's what's your prerogative?

Erin Colgrave: Uh, like I don't have a lot on except for the school runs. Um, but at the moment I'm free at night if that's if it's too hard during the day. But I don't have anything Monday, Tuesday or Friday, Saturday, Sunday. Saturdays will probably be recording and mcking around on those days. But like during the week I've got nothing on except for uh Thursday I'm free up to week seven and then I've got that class that crosses over.

Cody Cork: Yeah. Oh, yeah. On canvas.

01:08:47

Erin Colgrave: Yeah.

Cody Cork: Yeah.

Erin Colgrave: Um so yeah, Monday, Tuesdays, and Fridays I'm good with if that works. Um but yeah, between 10 and two.

Cody Cork: Yeah, cool.

Erin Colgrave: Um yeah, we need Yeah, we also need to don't forget let's do your diary.

Cody Cork: Yeah, cuz yeah, I just want to um keep like a strong like lane of communication. Um, what's this, sir?

Erin Colgrave: I've forgot to do that last time and I spent hours going through all my f***** communications to create that log. You know that log we had to do because like because I'm freelance like because I'm by myself and I'm just working with people that I know.

Cody Cork: Oh yeah.

Erin Colgrave: I've just got all these messages and phone calls just sent everywhere.

Cody Cork: Yeah. Yeah.

Erin Colgrave: And I didn't realize that I had to keep a diary log until like 3 days before it was due. So I had to go through 13 weeks worth of Slack, Messenger, videos, uh like phoneiles, emails, and so I don't want to do that again.

01:09:40

Cody Cork: Oh no. Y along again.

Erin Colgrave: And so I looked straight into project two when I found this yesterday. And sure enough, it says they want a log.

Cody Cork: Yeah, of course.

Erin Colgrave: Yeah. But they don't call it a log. They call it something else. Um, where is it? Major present. No. Ah, f*** it. Everything's open. Major P. Here we go. Um, project two, professional practice journal, right?

Cody Cork: professional practice channel. Cool.

Erin Colgrave: So, a journal that technical and creative contributions across a trimester.

Cody Cork: Well, um so yeah.

Erin Colgrave: So, you will need to do this for when I send you stuff as well. Um, so it's not quite a Yeah.

Cody Cork: Yeah, I'm pretty good at keeping up to date with that, but

Erin Colgrave: So it's like the technical, creative inputs, production decisions. So this is like all our meetings and stuff, collaborations, reflections on challenges and growth. And then weeks one, five and 11 are allins where progress is shared with peers.

01:11:02

Erin Colgrave: So that's the all-in meetings is the ones that Yeah.

Cody Cork: yeah, cool. Um, also, so, uh, This meeting's been summarized and stuff. Um, so you will get like a I'm not sure if it automatically did you logging in with like a Google account or like your student account?

Erin Colgrave: logged in on Google and it says this is being scripted or

Cody Cork: Yeah. So, I'm not sure if it automatically sends it to you, but um if not, I'll just send you the link to the document anyway, but it basically has like the full written

transcription and then actually summarizes like as notes and whatnot um automatically. So then, yeah, you can use that as um as part of your Oh, true.
Erin Colgrave: Yeah. Yeah. And if we see if I can get Ben in on a couple just so you can have a chat with him. Um, he did SAPE. He graduated in 2011. Yeah. Oh, 2017. Sorry, not 2011. 2017, but he's really like clued up with the audio.

01:12:15

Erin Colgrave: So, like all the like signal flow of how s*** works. And he's local musician as well.

Cody Cork: Yeah. Yeah. Yeah.

Erin Colgrave: that he plays um guitar, bass, and piano.

Cody Cork: f*** yeah.

Erin Colgrave: He's really good at the keyboards and he's got like synthesizers.

Cody Cork: God damn.

Erin Colgrave: Like he's really f***** Yeah.

Cody Cork: Oh, sick.

Erin Colgrave: Um he's currently teaching me logic.

Cody Cork: Oh, really? I've been Yeah, cuz I Yeah, cuz um I was talking about maybe starting at a studio.

Erin Colgrave: Yeah. Because he runs in Yeah.

Cody Cork: This is ages ago. Um and he was saying like he could only at the time he could only take me in uh as like a studio hand. And he's like, "You're gonna have to learn logic though because he uses loaded like Oh."

Erin Colgrave: See, Ben.

Cody Cork: So, I've been meaning to actually give it a go projects.

Erin Colgrave: Yeah. Well, if you're ever interested in it, like he's always looking for um collaborative joint project.

01:13:10

Erin Colgrave: I think he's like he's set up his own studio at home, but he just talked to me last week actually about wanting to start a mobile recording studio and he wanted to know.

Cody Cork: Oh, true. One of the old lecturers had has done that. She converted like a not a comp band, but like a um like a big van, a bus or some s*** into Yeah, I think it

was a bus um into like her own recording studio.

Erin Colgrave: Yeah.

Cody Cork: She can drive it anywhere. That's so cool.

Erin Colgrave: Yeah, his studio is quite long and skinny, so not really good for go over there to actually record. Um, he just come to other people with all the equipment and set it up with kind of thing.

Cody Cork: Yeah. Yep.

Erin Colgrave: Um, but yeah, so I've I've kept in contact with him. I brought him in on this. He's really excited on this. Um, but we've also we've got a Rolly Stone Musicians Club up here. I went to it the other night and I was speaking to the uh front of house guy there and he's um more than happy for me to come down and help with him and it's all analog so it's like 1992 death setup.

01:14:18

Cody Cork: Oh yeah, that was cool stuff.

Erin Colgrave: Um, yeah.

Cody Cork: f*** yeah.

Erin Colgrave: So, a bit of signal safe on that. So, I'm getting in on that. Um, but I might like try set up a duo thing with Ben's actually perform up there as well. Um, so we got a lot going on up here.

Cody Cork: Yeah.

Erin Colgrave: If you ever want the chance to come up and meet and like muck around in Logic or like he's really good.

Cody Cork: Yeah.

Erin Colgrave: Um, I've got to deal with him teaching him Ableton.

Cody Cork: f*** yeah. That would be dope.

Erin Colgrave: He's teaching me Logic. That's another reason why he's really because it's getting done in Ableton.

Cody Cork: f*** yeah.

Erin Colgrave: Like and when I was doing the prototype, I was sitting down doing it with him. He's like, "This is really f***** cool. I never thought of doing this." And so and he's so he's with Logic. It's got this one thing I loved in it is session drummer.

01:15:07

Cody Cork: Oh, yeah. Yeah. I know what you're talking about.

Erin Colgrave: Yeah.

Cody Cork: Yeah. Yeah. Yeah.

Erin Colgrave: It's also got a string session as well. And the strings sound than it does in Ableton like s*** for strings.

Cody Cork: Look at that.

Erin Colgrave: But this actually light logic actually produces a decent um like sound quality of it. Um, something I might get you to look at as well if you're interested just to like because there'll be background music like short loops and stuff.

Cody Cork: Yeah. Yep.

Erin Colgrave: Um, so you probably like I could probably send you those to do a quick mixown on.

Cody Cork: Yeah.

Erin Colgrave: Yeah. I don't know or how big they'll be.

Cody Cork: Um, so just quickly, yeah. Um, is this predominantly done in Ableton? Like are we going to be using anything else?

Erin Colgrave: Yes.

Cody Cork: Cuz if we use ProTools, I might have to resubscribe, but um Oh, okay.

Erin Colgrave: Uh, I didn't resubscribe to ProTools either. So, the only one I've got um because Logic is like a good blend between Ableton and ProTools, a good blend between the two.

01:16:08

Cody Cork: Easy.

Erin Colgrave: Um, because it's got kind of like the structure of it is basically ProTools.

Cody Cork: Yeah.

Erin Colgrave: you can add MIDI in and then you've got the session dresser and strings and yeah, so it kind of works both together.

Cody Cork: Yeah. Good.

Erin Colgrave: Um, but yeah, I see like when we set up this meeting, when we figure it out, I might get him to jump in on a couple.

Cody Cork: Yeah, dope. Um, yeah.

Erin Colgrave: Yeah.

Cody Cork: Uh, cool. Um, I think we'll probably sus the logistics of that kind of as we go, but um, yeah.

Erin Colgrave: Yeah.

Cody Cork: Cool, cool, cool.

Erin Colgrave: Did that um it says it's sent to you in um zip file and then the yeah the adapted script.

Cody Cork: Oh, the project. I think it just finished downloading scene six.

Erin Colgrave: So if you go into that the it's scene six. Yeah. But that table at the top of it if you press scene six it should just take you there. You don't have to scroll through.

01:17:24

Cody Cork: Yeah. Cool, cool, cool. Okay. Yeah. Yeah. Dope.

Erin Colgrave: Yeah. So, we've kind of set it up to be easy. So, the director notes are read over the whole scene, which is at the end of it. Um, and the the SFX green ones are just before what's being said.

Cody Cork: Yeah.

Erin Colgrave: So, as is taking place, these sound effects are going on roughly.

Cody Cork: Okay, cool. Yeah, yeah, cool.

Erin Colgrave: But if you have any other ideas in it, let me know because I was kind of like I'm getting a bit repetitive with it because it's basically rain and footsteps and and foley people fighting basically.

Cody Cork: Yeah, cool.

Erin Colgrave: Um there's a um news report as you as they walk down the street, they go past like a newspaper stand or it's on the radio or something. Um, so that would need to be mixed differently as well. I'm thinking maybe like one of them old tape recorder things. He's actually got a um 1970s national Panasonic tape recorder like cassette stereo.

01:18:20

Cody Cork: Yeah. Oh, what? Oh, D. Yeah.

Erin Colgrave: Yeah. So I was thinking um of when we do these recordings to get him to bring that in and we'll flow it through there um to get that tape saturation.

Cody Cork: Yeah. Yeah.

Erin Colgrave: Um, that's what I mean. He's got all that.

Cody Cork: So, I found Yeah. cuz I found um so we're doing a film project and we were trying to figure out like how to do like a walkie-talkie radio effect um like in the mix for

some dialogue and we were like f***** it

Erin Colgrave: Yeah.

Cody Cork: doesn't sound quite there legit and the best way that we ended up doing was actually just getting walkie-talkies and then like holding one up to a speaker and then the other one up to the mic.

Erin Colgrave: Y like a reamping technique type thing.

Cody Cork: Different rooms. It was like, "Oh, nailed it." Yeah. Just like actually just getting the legit s***. And even like um I remember this one scene where she had like um the old f***** uh iPod headphones and they wanted it where it's like you hear the intro song but then when she takes it out it

01:19:28

Erin Colgrave: Yeah. Yeah.

Cody Cork: goes to like hear it like in the world playing through the headphones and then literally just played the song and cranked it up hell loud on the little iPod headphones and then recorded that.

Erin Colgrave: Yeah, that's actually really out of the box thinking.

Cody Cork: Yeah. Yeah. Yeah. Yes.

Erin Colgrave: I like it. Um, what I I tried to get like an old radio sound um for a small section of something that I did and I ended up getting a um you know those handy towels, you know the paper towels, a

Cody Cork: Yeah. Yeah. Yeah.

Erin Colgrave: roll of that and I spoke through it and put that microphone and then added a tape effect onto that and that really well.

Cody Cork: Oh, what? On top. Oh, true.

Erin Colgrave: Yeah, cuz it get distortion already before it goes into process.

Cody Cork: That's cool. I like that. Yeah, that's dope.

Erin Colgrave: Yeah. Yeah. I just use one of them.

01:20:36

Erin Colgrave: I record it through onto a Yeah. onto a microphone by talking through it because it was about that long.

Cody Cork: Yeah. Yeah.

Erin Colgrave: So, it had a bit of time to resonate.

Cody Cork: f*** yeah. Yeah. That's sick. Also, if you say you didn't have the role, um, in Ableton, there's an Ableton plugin called Corpus.

Erin Colgrave: Yeah. Yeah, I haven't seen it.

Cody Cork: Have you heard of that? It's legit like a It's a simulator app uh, plugin. So, it simulates what audio sounds like through different materials. So you got one that's like a tube, one that's like a metal plate, one that's like um Yeah.

Erin Colgrave: There. Oh, yeah. Yeah.

Cody Cork: Yeah. So that that stuff's help cool as well.

Erin Colgrave: Yeah. So that um Xbox Pro plugin, right, has those effects.

Cody Cork: Yeah.

Erin Colgrave: So basically what it is, it's like a all-in-one. So it's got all your compressors, your spatial, everything in one and you just kind of little thing.

01:21:36

Erin Colgrave: It's actually really easy to use. Um but it's got the plate um like reverb plate plug in it.

Cody Cork: Oh, reverb played. Yeah.

Erin Colgrave: Yeah.

Cody Cork: f*** yeah.

Erin Colgrave: Yeah. And it's got like a shitload of f***** um default art settings too.

Cody Cork: Cool.

Erin Colgrave: Like one was like low and mysterious. Another one was like really robotic. Then you've got like glistening female vocals. Then you got rough male vocals and like Yeah. And you can just like through it.

Cody Cork: Same.

Erin Colgrave: You can see what the plugins it's actually using built within it.

Cody Cork: Yeah, I mean that's the best way to learn most of the time.

Erin Colgrave: Yeah. And I've got like a um with the actual product actually got three master classes. So one's on editing, one's in Yeah.

Cody Cork: Oh, true.

Erin Colgrave: And I've been watching it and I'm like f*** yeah. like just little things like someone I knew but some I'm like you know so they're actually quite yeah they should be blue

01:22:34

Cody Cork: Dope. Um, so I've just opened your Ableton project. What? Um, oh, okay. So, it's saying that the U Xbox couldn't be found. Hang on. Let me open another project. See if I can actually even open Xbox.

Erin Colgrave: Yeah. So, the freeze doesn't actually freeze the plugin. So, I don't understand what it does.

Cody Cork: Oh, I haven't haven't actually tested that yet. I'm just saying if um cuz I could say that cuz I'm pretty sure I just installed Xbox. Maybe I didn't Xbox. Okay. So, I can open Xbox Pro. Um, but for some reason it's saying that I can't open your one, but I'll see if if the audio actually just comes through at all. And it's on the top track, right? Yeah. Oh, no. There we go.

Erin Colgrave: Yes, it's Did I have oone 11 on it?

Cody Cork: Yeah. Yeah. Okay. Okay. So, I just need to download um Ozone 11 again.

01:24:26

Cody Cork: Yeah. Um Oh, Oone 11 equalizer. I'm pretty sure you can get the Oone 12 equalizer for free now.

Erin Colgrave: Yeah. Right. Oh, yeah. I was playing with different Yeah, I was playing with plugs that I never played with before. I was experiment. Yeah. Just trying to make it worthy of like, you know, but it came through as an HD, so I wasn't upset about it.

Cody Cork: f*** yeah.

Erin Colgrave: Yeah, both of them got an HD, so I was quite happy with that.

Cody Cork: That's sick.

Erin Colgrave: Yeah.

Cody Cork: Um cuz we got um Are you talking about the projects last try? Cuz we got a distinction on the first one. We really got a credit on the second one.

Erin Colgrave: Oh, really?

Cody Cork: Yeah. And then looking at the um like feedback notes, it literally gave us nothing cuz I'm like I don't know where we f***** up. But but like Oh, true.

Erin Colgrave: I didn't even get notes because it came back as a Z D because um Tim got it like the grades grading extended because he was sick.

01:25:41

Erin Colgrave: And so I never actually got my grade for it. And then I got an email saying that um it had been changed to an HD if the ZD had been from the HD. And the only way I could have got an HD for the holistic assessment is to get an HD for the second one as well. Otherwise, I got a distinction.

Cody Cork: Oh, true.

Erin Colgrave: But because those projects are now being archived, those units been archives, I will never ever see that. So if he did write comments, I have never I asked him, I said, "It still doesn't come up in my um thing."

Cody Cork: You can you can still you can still check Oh, what?

Erin Colgrave: She goes, "Yeah, no."

Cody Cork: Oh, that's crazy cuz I only checked mine like right. Oh, that's so annoying.

Erin Colgrave: Yeah, it's pain in the ass. So, I'm gonna Yeah, I'm going to hit him up tomorrow. Go. Um but yeah, I've got to run cuz I've got to do a school run um in Y. I'll bring I'll bring my laptop

01:26:41

Cody Cork: Yeah, no stress. Um, yeah, I'll send you the uh meeting notes and stuff and I'll go through probably most of this today. Um, and I'll probably see you tomorrow anyway.

Erin Colgrave: in tomorrow anyway in case there's any more questions that I haven't answered. So, I've got the information for you.

Cody Cork: Yeah, no stress.

Erin Colgrave: Um, and if there's any Hey, Connor. Connor's homesick today. The other one's at school. Um, if there's an issue with the plugin, this is Connor. This is my mate Cody.

Cody Cork: Hey, what's up?

Erin Colgrave: Um, so yeah, like if you have any issues with that there or the question, I'll open up on my laptop so you can see what it is on mine if there's Yeah.

Cody Cork: Yeah, yeah, yeah, yeah. But no, I think um it it'll be sorted. Um yeah, OVO uh Xbox works. So, cool, cool, cool.

Erin Colgrave: Excellent. Cool.

Cody Cork: All right.

Erin Colgrave: Now, you can probably make them a bit better.

Cody Cork: Sweet as.

Erin Colgrave: I just did a slight adjustment with like um I put in a setting and then

slightly adjusted it. But yeah, see what you can do with it.

Cody Cork: Yeah.

Erin Colgrave: Like I said, I was on experiment. I don't I don't know a lot about vocals, which is dumb seeing as the whole thing is vocals. really put the myself. Um, yeah, I'll see you.

Cody Cork: But yeah, sweet. All right. Well, I'll let you go. Um, and then I guess we'll touch base tomorrow.

Erin Colgrave: What is it? 10 o'clock 12, I think.

Cody Cork: Yeah, I think so. I need to check that.

Erin Colgrave: I think it is. I don't know. It could change in an hour. I don't know. That's how my at the moment.

Cody Cork: Yeah.

Erin Colgrave: What's Yeah.

Meeting Notes (Shadow)

Meeting records [Transcript](#)

Meeting Notes Summary from 'Shadowr' App

Meeting Outline

Project Management and Class Structure

- The audience testing is scheduled for tomorrow as per the agenda.
 - There seems to be confusion regarding the class schedule, with some classes being held only once every four weeks.
 - The only formal classes will be on campus in specific lecture theatres, with some classes being online.
 - The project involves planning and producing content for a small-scale immersive experience that incorporates audio and visual elements.
 - The class structure includes both online and in-person sessions, with specific timings changing throughout the semester.
-

Technical Setup and Equipment

- Cody mentions the benefits of using a fingerprint function on his new MacBook.
 - Speaker3 discusses using a 12-channel mixer for recording multiple microphones simultaneously.
 - There is a plan to incorporate ambient soundtracks into the project, which includes tracks already created by Ben.
-

Project Collaboration and Responsibilities

- Cody is coordinating with the group to confirm roles and responsibilities for the project.
 - Speaker3 has completed the script adaptation for the first project and is planning to record dialogue next weekend.
 - There is a discussion about the need for sound design to build tension and ambience in the project, particularly for a scene involving a knife fight.
-

Project Overview and Timeline

- The speaker expresses concern about the timeline for the project, noting that they have only seven weeks to complete the designer process and audio testing.
 - The speaker mentions that they have a book ready for audio testing, which disrupts their original plan.
 - The speaker plans to ask Tim about using a prototype for A-B testing.
-

A-B Testing Methodology

- The speaker explains the concept of A-B testing, which involves comparing two different ideas or versions.
 - They plan to create two audio versions: an unabridged audiobook and an abridged immersive audiobook.
 - The unabridged version will be a standard narration, while the abridged version will be an immersive adaptation.
-

Data Collection and Audience Testing

- The speaker outlines the need to collect data on audience engagement and interaction with both audio versions.
 - They plan to test various aspects, including sound editing, narration clarity, and overall enjoyment of the story.
 - The speaker suggests using surveys to gather feedback from listeners on their experiences with the audiobooks.
-

Feedback Mechanisms

- The speaker discusses the use of focus groups and social media to gather unsolicited feedback on the audiobooks.

- They mention the potential for using platforms like Sampley to collect detailed feedback on specific audio sections.
-

Audio Technology and Innovations

- Cody introduces the idea of using 3D audio or spatial audio technology for the project.
 - The speaker expresses interest in incorporating spatial audio into their project and plans to include questions about it in the feedback survey.
 - The speaker also considers including an AI-generated voice in the beta testing to assess listener perceptions of AI versus real voices.
-

Audio Production and Standards

- Discussion on testing audio production skills to achieve realistic sound versus AI-generated sound.
 - Need for a graphic designer to create cover art for the audio project.
 - Mention of the lack of governance and standards for audiobooks, particularly in Australia.
 - Reference to ACX (Audible's Audiobook Creation Exchange) and its limitations for Australian users.
 - Importance of maintaining consistent volume levels throughout the audiobook chapters to avoid abrupt changes.
 - Discussion on the significance of spatial audio mixing and downmixing to stereo for different platforms.
 - Explanation of how different platforms (YouTube, Spotify, Apple Music) have varying loudness standards for audio.
 - Consideration of the current market's preference for stereo audio over spatial audio due to technology limitations.
 - Emphasis on mixing for small speaker systems as the primary listening devices for the audience.
-

Collaboration and Resource Sharing

- Inquiry about finding a graphic or design student for assistance with the project.
 - Mention of sharing audio standards and information from ACX to achieve desired production quality.
 - Discussion on the need to focus on main listening devices and their impact on audio mixing.
-

Feedback and Improvement

- Feedback from Matt on the audio project, highlighting the need to focus on main listening devices for better mixing.
 - Discussion on the use of specific plugins in audio mixing and whether to turn them off before sharing tracks.
-

Plugin and Track Management

- Discussion about the XVox Pro plugin and its features, including vocal effects and mixing capabilities.
 - Cody suggests duplicating the track and freezing one version with the plugin to ensure effects are applied, while keeping a flat version as a backup.
 - Speaker3 mentions sending the DAW session and the importance of version compatibility with the plugin.
 - Cody confirms he can work with the newer version of the plugin and discusses the need for freezing and flattening tracks for compatibility.
 - Speaker3 explains the importance of effects in the project, particularly for creating a spatial sound for whispers in the audio.
-

Sound Design and Mixing Direction

- Speaker3 outlines the need for sound design and mixing, emphasizing the distinction between sounds in the character's head and external sounds.
 - Cody asks if there is a specific mix direction or sound design script to follow, indicating a collaborative approach to the project.
 - Speaker3 mentions the flexibility in sound design and invites suggestions from the team.
-

Project Timeline and Collaboration

- Discussion about the project timeline, with plans to work on multiple projects simultaneously and deliver new content every two weeks.
 - Speaker3 expresses the need for collaboration on sound design while being mindful of the team's workload.
 - Cody reassures that the team is there to support and assist with documentation and other tasks as needed.
 - Speaker3 plans to beta test the prototype and gather feedback through surveys, indicating a structured approach to project development.
-

Final Mixing and Mastering

- **Speaker3 discusses the final mixing and mastering process, indicating it should not take too long.**
 - **There is an acknowledgment of the potential workload due to multiple projects and the need for efficient time management.**
-

Audio Production and Editing

- **The final audio will likely be around an hour long, combining all chapters together.**
 - **The speaker will send ACX information for cutting and mastering, which will be a focus for the audio engineer.**
 - **The audio files will need to meet specific submission requirements for quality and bit rate.**
 - **The plan is to have the narrator announce each chapter, and include scene locators for better organization.**
 - **The final product will include an introduction, chapters, and an outro, with credits for voice actors and authors.**
 - **The audio will be mixed and mastered as one cohesive piece before being broken into individual files for ACX submission.**
-

Collaboration and Roles

- **There is a discussion about how to approach sound design and recording, with an emphasis on collaboration.**
 - **The speaker is open to ideas and contributions from the team regarding sound design and mixing.**
 - **The team is considering how to distribute the workload for mixing and mastering across different projects.**
-

Scheduling and Meetings

- **The team discusses the possibility of having weekly or fortnightly meetings to check in on progress.**
 - **The speaker is available for meetings on Monday, Tuesday, and Thursday evenings, and is flexible with scheduling.**
 - **There is a need to maintain strong communication and documentation throughout the project to avoid issues experienced in the past.**
-

Documentation and Logs

- The speaker mentions the requirement for a professional practice journal to document technical and creative contributions.
 - The journal will include reflections on challenges, growth, and collaboration details.
 - The team will need to summarize meetings and document progress for the project.
-

Collaboration and Music Production

- Ben, a local musician who graduated in 2011, is skilled in various instruments and is currently taking a course in Logic.
 - There is a discussion about Ben's interest in starting a mobile recording studio, which could enhance collaborative opportunities.
 - The speaker mentions setting up a duo with Ben to perform and collaborate on music projects.
 - Logic is highlighted as a good blend between Ableton and Pro Tools, making it suitable for their projects.
 - The speaker is considering using a 1970s tape recorder to achieve a specific sound quality for their recordings.
 - Cody shares an experience of creating a walkie-talkie radio effect for dialogue using actual walkie-talkies, showcasing creative sound design techniques.
 - The use of a plugin called Corpus in Ableton is discussed, which simulates audio through different materials, enhancing sound design capabilities.
 - The speaker mentions a product that includes multiple effects and masterclasses, which aids in learning and improving their production skills.
-

Software and Plugin Issues

- Cody mentions he can open Xbox Pro but is having trouble with another application, indicating a potential issue with the software.
- Discussion about needing to download Ozone 11 again, with uncertainty about whether it was previously installed.
- Speaker3 recalls playing with plugins and expresses satisfaction with the HD quality of their work.
- Cody and Speaker3 discuss their project grades, noting discrepancies and the lack of feedback from their instructor.
- Speaker3 mentions that their project grades have been archived, making it impossible to review comments or feedback.

- Cody plans to follow up with their instructor regarding the grading issues.
-

Project Collaboration and Feedback

- Cody and Speaker3 discuss their project outcomes, mentioning they received a distinction and credit on different projects.
 - Speaker3 expresses frustration over receiving no feedback on their project, which complicates understanding where they went wrong.
 - Cody indicates he will check his grades and follow up on the feedback situation.
 - Speaker3 offers to open his laptop to show any relevant information regarding their projects.
-

Meeting Logistics

- Cody mentions he will go through most of the discussed topics today and plans to meet again tomorrow.
 - Speaker3 confirms he will bring his laptop to the next meeting for further discussion.
 - The group discusses the timing of their next meeting, with Cody needing to check the schedule.
 - Speaker8 thanks everyone and concludes the meeting.
-

Action Items

Send the adapted script for the prototype to the group for review

- Assignee: Cody
- Schedule: Not mentioned

Create surveys to gather feedback on the audio and sound design

- Assignee: Cody
- Schedule: Not mentioned

Record dialogue next weekend

- Assignee: Speaker3
- Schedule: Next weekend

Send the script and sound design notes to Cody for input and collaboration

- Assignee: Speaker3

- **Schedule: Not mentioned**

Participate in the sound design and contribute ideas and feedback throughout the project

- **Assignee: Speaker6**
 - **Schedule: Not mentioned**
-

Meeting Notes (Superwhisper)

Meeting records [Transcript](#)

Meeting Notes Summary from 'Superwhisper' App

Action items

- Record dialogue for prototype scene next weekend (Responsible: speaker who is arranging recording; invitees: Ben, narrator(s), group members).
- Provide Ableton project/stems and verify plugin versions; if freezing/exporting plugins, also provide flattened audio tracks (Responsible: person who mixed the prototype).
- Master/mix prototype to agreed loudness/format standards and export per ACX requirements (Responsible: mixing/mastering team – group members to confirm who; requester to supply target platform/standards).
- Prepare A/B test materials: unabridged audiobook segment and immersive/adapted audiobook segment for beta testing (Responsible: project lead; to provide adapted script and recordings to team).
- Create and deploy beta testing instruments (surveys + Samply/Samply-like commenting links; record listener device/headphone metadata) and recruit test participants/focus groups (Responsible: project lead with support from Trista and Ace; outreach via Facebook audiobook groups, Slack/Capstone job boards).
- Collect and analyse beta test data (survey responses, Samply timeline comments, listening analytics) and produce findings for Project One testing deliverable (Responsible: project lead; team to contribute to data collection and analysis).
- Share adapted scripts and sound design notes with team; solicit and incorporate sound design suggestions (Responsible: project lead to send scripts; team to review and contribute).

- Arrange regular check-ins (weekly/fortnightly) and confirm meeting days/times that suit members (Responsible: project lead to propose schedule; all to confirm availability – suggested windows Mon/Tue/Fri 10:00–14:00; Saturdays for recording).
 - Maintain professional practice journal / production log entries each week documenting technical/creative contributions and collaborations (Responsible: all team members).
 - Confirm final delivery workflow (single master session broken into chapter files; file naming and loudness targets per ACX or chosen distributor) and share export specifications (Responsible: mixing/mastering team; project lead to confirm target platform).
 - Share plugin list (3D panners, spatial audio tools) and test compatibility with stereo/headphone playback; consider including spatial vs stereo downmix in beta testing if feasible (Responsible: person researching plugins to send list to team).
 - Provide project files or stems via Slack/zip and confirm ability to open for collaborators (Responsible: sender of Ableton/other DAW project; recipients to test and report issues).
-

Explicitly discussed facts / decisions

- Project scope: Produce an immersive audio-visual small-scale physical-space experience; team is focusing on audio (sound design, Foley, dialogue recording), with potential visual/projection collaborators later.
- Prototype target: One scene (scene six / prototype scene) chosen for quick development and beta testing to satisfy Project One week 7 testing deliverable.
- Testing approach: A/B testing comparing standard (unabridged) audiobook segment vs an immersive/adapted audiobook segment; test metrics to include narration quality, clarity/pronunciation, sound design levels, overall enjoyment, story/content satisfaction, and perceived use of AI voices.
- Participants for beta: Use author's networks and project team networks; recruit external listeners via audiobook Facebook groups and other channels; split participants into groups for A/B exposure.

- **Data collection methods:** Online surveys (Google Forms/SurveyMonkey), Samplify (or similar) for timeline comments and analytics, focus groups, and social media listening (longer-term after release).
- **Deliverables / schedule outline:**
 - **Week 3–5:** Foley design (applies to all three books).
 - **Week 6–8:** Sound design for all three books.
 - **Prototype recording** planned next weekend; subsequent prototype mixing/mastering and beta distribution within two weeks to meet testing deadline.

Technical considerations:

- **Export strategy:** Produce one cohesive master session, then export per-chapter files with consistent locators/scene stamps; adhere to ACX formatting and loudness guidelines where applicable.
- **Loudness and format:** Be aware different platforms have different LUFS targets; avoid excessive clipping or too-low levels to prevent unwanted noise after normalization.
- **Spatial audio:** Possible use of 3D panners / spatial plugins, but mass-market listeners mostly use stereo/headphones; include headphone/device type in survey if spatial audio is tested; consider downmix behavior (3D/spatial vs stereo downmix) as a test variable only if feasible within timeframe.
- **Plugin compatibility:** Verify NeuroAudio (e.g., “Oxbx/Obox/Xbox” vocal chain?) and Ozone versions; provide frozen/flattened tracks if collaborators lack plugins; include stems as fallback.
- **DAW workflow:** Primary work in Ableton (project files/stems available); collaborators may use Logic/Pro Tools — confirm export formats and session transfer method.

Roles and contributions:

- **Project lead:** adapted script, coordinating recording, testing design, outreach, surveys, and project scheduling.
- **Ben:** produced some ambient tracks and will assist with sound design/music.
- **Trista and Ace:** to help create surveys and testing materials.
- **Mixing/mastering support:** group members to provide mixing and mastering feedback and final masters.
- **Additional possible collaborators:** film/visual students for projection mapping; graphic designer for cover (consider AI vs human covers in beta).

Documentation requirements:

- Professional practice journal / production log required across trimester (technical/creative contributions, collaboration, reflections) with milestones at weeks 1, 5, 8/11 (all-in sessions).

Logistics:

- Recording logistics: plan to record multiple microphones (4–5 mics) into a 12-channel mixer (Soundcraft Signature 12) for simultaneous takes.
- Meeting cadence and availability: Suggested check-ins Mon/Tue/Fri 10:00–14:00; Saturdays for recording; confirm exact recurring meeting after group confirms availability and Tim's clarifications.

Unresolved items to confirm with tutor (Tim):

- Approval to use one scene as the prototype for Project One testing deliverable.
- Any additional assessment requirements or clarifications about the testing deliverable and submission expectations.
- Clarify “all-in” session meaning and scheduled weeks (weeks 1, 5, 8, 11 were mentioned).

Miscellaneous:

- Some team members prefer stereo masters for broad compatibility; spatial audio is an experimental/optional branch.
 - Project files, plugin lists, ACX submission info, and meeting transcription/notes to be shared on Slack.

Meeting Notes (Meetily)

Meeting records [Transcript](#)

Meeting Notes Summary from 'Meetily' App

People

- **Unknown Speaker - Multiple** (Role: participants in recorded session; many segments inaudible or musical interludes)
- **Editor/Producer - Unknown** (Role: technical lead; references plugins, Xbox compatibility, version updates and project workflows)

Session Summary

- Recording contains extensive music, noise and many inaudible segments; discussion fragments focus on audio mixing, plugins and project file sharing.
- Technical topics mentioned: stereo mix vs special edition mix, freeze & flatten workflow for plugins, and testing plugin simulations (tube models).
- Software/version note: repeated references to updating to version 1.0.6 for compatibility (Xbox or related tool).
- Collaboration/sharing: upload audio and share links with analytics (play counts, listen duration); at least one person volunteered to send files.
- Operational note: team is waiting on confirmation from external contacts; many personal/non-actionable comments present in recording.

Critical Deadlines

Key Items / Decisions

- Proceed with updating tool/project environment to version 1.0.6 to ensure compatibility.
- Adopt and test mixing workflows: stereo mix, special edition mix, and freeze & flatten plugin technique.
- Use uploaded audio + shareable links with basic analytics to distribute assets and track listening.

Immediate Action Items

- Update project/tool to version 1.0.6 (assignee: Tech Lead/Team).
- Upload and share audio/project files with team; enable analytics for plays and listen time (assignee: file owner).
- Test opening projects on Xbox and target devices; report any compatibility issues (assignee: Tech Lead).
- Run mixing tests (stereo vs special edition) and document preferred settings and the freeze & flatten results (assignee: Mixing/Audio team).
- Follow up to obtain confirmation from external contacts referenced in the recording (assignee: Coordinator; status: pending).

Next Steps

- Schedule and perform the update to version 1.0.6, including backups before the update.
- Complete upload of audio assets, share links with group, and enable analytics tracking.
- Complete device compatibility tests and summarize findings.
- Compare mix approaches, select preferred workflow, and update team documentation.
- Schedule a follow-up meeting after updates and confirmations are completed.

Audio & Mixing

Discussion fragments focus on mixing approaches including stereo mix, a 'special edition' mix, plugin chains, and simulating audio through tube models.

Participants discussed using a freeze & flatten workflow for plugins to create a finalized audio track and to test different plugin chains and settings.

Software, Versions & Device Compatibility

Multiple mentions to update tools/projects to version 1.0.6 to ensure compatibility with target devices (Xbox referenced).

Action item to verify project files open and function correctly on Xbox and other target devices after updating; document any issues.

Sharing & Analytics

Plan to upload audio files and share links with the team; enable basic analytics for play counts and listening duration.

A participant volunteered to send files to others ('I'll send it to you in stock'); confirm who will own the uploads and sharing links.

Logistics & Miscellaneous

Recording contains long stretches of music, noise, personal comments and many inaudible segments; most are non-actionable for the project.

Team is waiting on confirmation from external contacts for an outstanding item mentioned; follow-up required.
