NOTES FOR PETE

Doesn't really need to be said at this point, but as always - feedback is appreciated, and if there's ever any additional info that would help your part of the process - feel free to let me know!

- I have made 2x folders - 1x for the RAW Unedited audio | 1x for Scrubbed Audio - If I can get around to doing it soon!
 - Gone through and edited file names like before & *Dead / False Takes* are located in the **FALSE TAKES** folder.
 - The 'Goofy' takes done by both Charlotte & Seth are located in the **Foley / Atmos** folder. These **do not** have slate calls, and I assume are used as off screen audio to tie in the crash scene.
 - If you want to drop this roughly into the place it needs to be - I can tighten the timing/pacing up later while doing the rest of the Foley.
 - I've begun downloading & splitting the tracks up by "Old Mervs" - Assets for that are located: TLSA Drive | SB - Sound Department.
-
- Further info breaking down both the Old Mervs Music Splits, as well as everything regarding the issues with recording - *specifically* Seths' mic is outlined below in **THOUGHTS & AUDIO NOTES**
 - For the music - if you guys end up using any other tracks & need me to split those - just let me know, I can usually get it done within the hour

PROJECT PROCESSES

These notes apply across the whole of the shooting process, and are the basic ideas & processes of how the TLSA audio team works. Any notes specific to the shoot day will be appended onto that days Sound Report page.

Recorded audio (RAW) is backed up on our end and any **dialogue** is *a/ways* under the assumption of '**non-disclosure.**' Processed Foley & SFX recordings are assumed as free-use unless otherwise specified as per project agreement, or if specific recordings are deemed sensitive, private or something similar. All audio will also be passed on in conjunction to the Data Wrangler / Editing teams specifications.

- All audio recorded using the F8n will be using the audio format 'PolyWAV' - **TLDR:** All inputs are bounced into 1 WAV file.
 - This means that each of the different inputs are recorded separately but bounced into the 1 'stacked' WAV file. Inside Premier Pro / Da Vinci - audio can be dropped down to see the full stack & each of its inputs.
- Recordings will also be utilising 'Dual Channel Recording' - **TLDR:** A backup (lower volume) channel is recorded, for each input.
 - This means that each channel recorded is being recorded again on a seperate channel at roughly -10db. This gives us the flexibility to record the audio 'hotter' (at higher sensitivity) with less of a worry about peaking the

SHOOT DAY 01

SHOOT DAY NOTES

NEW PHOBIA UNLOCKED:

Having to wake up at 3am

SOUND RECORDER: CODY CORK

SOUND MIXER: CODY CORK

SHOOT DAY 01 - TUESDAY 13TH

SCE.	SHOT	NOTES	T1	T2	T3	T4	T5
15	A	-	SETH MIC	SLATE CALL LOW	SETH MIC	SETH MIC	
15	B	-					
15	C	-	SETH MIC				
15	D	-	B.G NOISE CROWS				
15	G	-	SETH MIC	SETH MIC	SETH MIC	BEST AUDIO	
15	H	-			BIRDS	MISSING ?	WIND B.G NOISE
15	I	-	WIND B.G NOISE				
15	K	-	WIND B.G NOISE				
15	L	-	WIND B.G NOISE				

RECORDING / AUDIO NOTES

- **WARNING:** Seths' mic might be loud - watch your ears
- 15G - the audio of Seth running down the hill - T4 is perfect | but his other dialogue might be a little low - can use this section from other takes
- I think I might have set the LPF a little soft | not on all inputs - so there might feel like a little more wind / low-end noise (compared to previous shoots)
- 15I-T4, as well as any shots in-between 15I - 15L - I don't have any audio for - please let me know if this is an issue!

POST SHOOT THOUGHTS & AUDIO NOTES

First of all - SORRY!

I feel like the audio for this shoot hasn't quite lived up to the standard I've had across the previous shoot days. Reasons / excuses regardless, I take all responsibility for the work I pass on, so apologies for the sub-par audio on this day!

I've outlined more or less everything, further down in this section.

But as a reflective note:

I think (for audio specifically anyways) this is a good showing of why I've always found it important to try and prep as much as I can the day prior. With a situation like SAE and equipment constantly being shared, this is a good reminder that it isn't OCD (lol) but basic 'good practise' to make sure that there's enough time to ensure that all my systems are set & ready to rock'n'roll.

I'll make sure to keep this at the top of my mind, with any shoots / sessions moving forward!

IMPORTANT!

Because there was a different kit used for this shoot - a lot of the settings were skewed for the context of our shoot. I realised this a little too late, and not wanting to waste any more time as we were already behind schedule, I ended up trying to fix settings as we began shooting.

This led to 2 main issues:

- Boom mic for some of the earlier recordings will be missing - Phantom Power (48V) needs to be set *per input* on the F8n, & was off by default on INPT1 from previous user.
- Seths' Lav mic for a lot of his recordings earlier in the day have been rendered more or less unusable. This was due to incorrect Gain Staging on the wireless Lav Radio. *For Context:*
 - When using Lavs there's *2x stages to the Input Volume*: - 1. Lav Wireless Radio (unit Lav-mic is attached to) / 2. Audio Interface (eg: Zoom F8n). Thus we **need to ensure** that every stage down the line **does not peak** over 0dB.
 - The F8n's **Mic** Input level (at it lowest possible setting) is already at +10dB, so the Lav Radio needs to be set accordingly. With a more full bodied voice like Seths' the Lav Radio had to be set at -20dB, to give enough headroom for both controlled & energetic performances.

SETH MIC ISSUE - SIDEBAR

~~I'll be scrubbing through the audio over the weekend & hopefully with a bit of work, we might be able to save some takes. If, when editing there isn't any 'usable' audio for the take you want — let me know, as this will be a big incentive to begin the dreaded ADR talk. I still might be able cut together audio from better takes (if there is any) but that ultimates comes down to weighing up what would be less noticeable in the end — splicing from other performances / takes — or re-recording in studio.~~

EDIT:

I decided not to actually go through and scrub the audio, instead, I'll wait for your cut of the scenes, then attempt to fix / work with the audio then.

ALSO IMPORTANT

Once the Post Production phase fully kicks off, I would say it to be high advisable we discuss some logistical things. The first & most important being me, access to facilities / studios & equipment bookings. On top of this, depending on how things unfold as we move forward, I might need a hand with some audio recording, main concern being the car if I can't work it with Sound Design.

No stress with this though, as I'll make sure to voice any needs or concerns well in advance, but also could be a good opportunity for anyone who might be interested in peeping the audio process.

SOAPBOX MUSIC SPLITS

I've gone ahead and started downloading / splitting the Old Mervs tracks - everything *before* 2021, but also the tracks "Out of Luck" & "Wait Around." The last 2 were released in 2021 - but licenses are either *Old Mervs*, or the same as the previous ok-to-use tracks. So with that I'm assuming they'll be fine, let me know if this isn't the case though!

Each track will include the splits:

- Full Track
- Vocal Acapella / Instrumental Splits
- Individual Instrumentation Splits

NOTE: Due to obtaining the tracks from different places - audio quality for each (including splits) may vary. If this is an issue, or you want to ensure highest quality music possible, we have 2 main options.

1. Obtaining a HQ version from the band themselves (I can re-split w/ HQ track, if the band doesn't want to share their own stems)
2. If it fits within your budget, purchasing track downloads can be an option (again can re-split w/ HQ track) **BUT...** If this is the path you want to go down - let me know. This is *VERY* important, as some platforms (like iTunes) still wrap their purchases with DRM (digital rights management). This can make the music completely unusable within editing software - depending on your program.

PS. - The individual splits can be further processed if there is by chance extra noise, or if theres a stylistic choice needed.

SOAPBOX MUSIC [IDEA]

Old Mervs have recorded an acoustic version of one of their tracks before, if there's a track (lyrics, etc) that really speaks to the film, given time budget, etc, could be an idea to ask them to record an acoustic version.

I've outlined some of the ideas as to how this could be beneficial for both the film & the band.

This is purely me spitballing ideas as, I'm bored with other uni work, & also don't know the intricacies of the back-end management for the film. If this idea feels worth exploring, I'll be more than happy to open that line of dialogue!

1. Can be a good way to aid in the marketing of the film. As this will encourage fans of the band, to possibly check out the film
2. The band can leverage this as a way of showing their music to a whole new subset of people, possibly a new audience who wouldn't have discovered their music previously, think film festivals & all of the different places the film will be shown.
3. The band can also use this as a proof-of-concept, showing that their music works for film, especially for related / adjacent genres.
4. Exclusivity can be a low-cost & simple way to add more perceived value to something. Think of the brand *SUPREME*. They release products with only a limited print-line, which in turn drastically raises the value per-product.
 1. If we think of this in the context of this project - A variation of a popular track that is in essence exclusive to the film, adds a certain degree of value to the film already, while for the band, if they play acoustic at shows, can use this as a "back pocket item" where they occasionally play it live.
 2. This creates an inherent difficulty in the consumption, this can in turn help build hype & mystery behind the band.
 1. The concept behind this is to get the "super-fans" hyped behind something, if the only way to experience something is to watch the movie, or attend the live show - you can more or less guarantee that they'll do that
